# BIM in FM

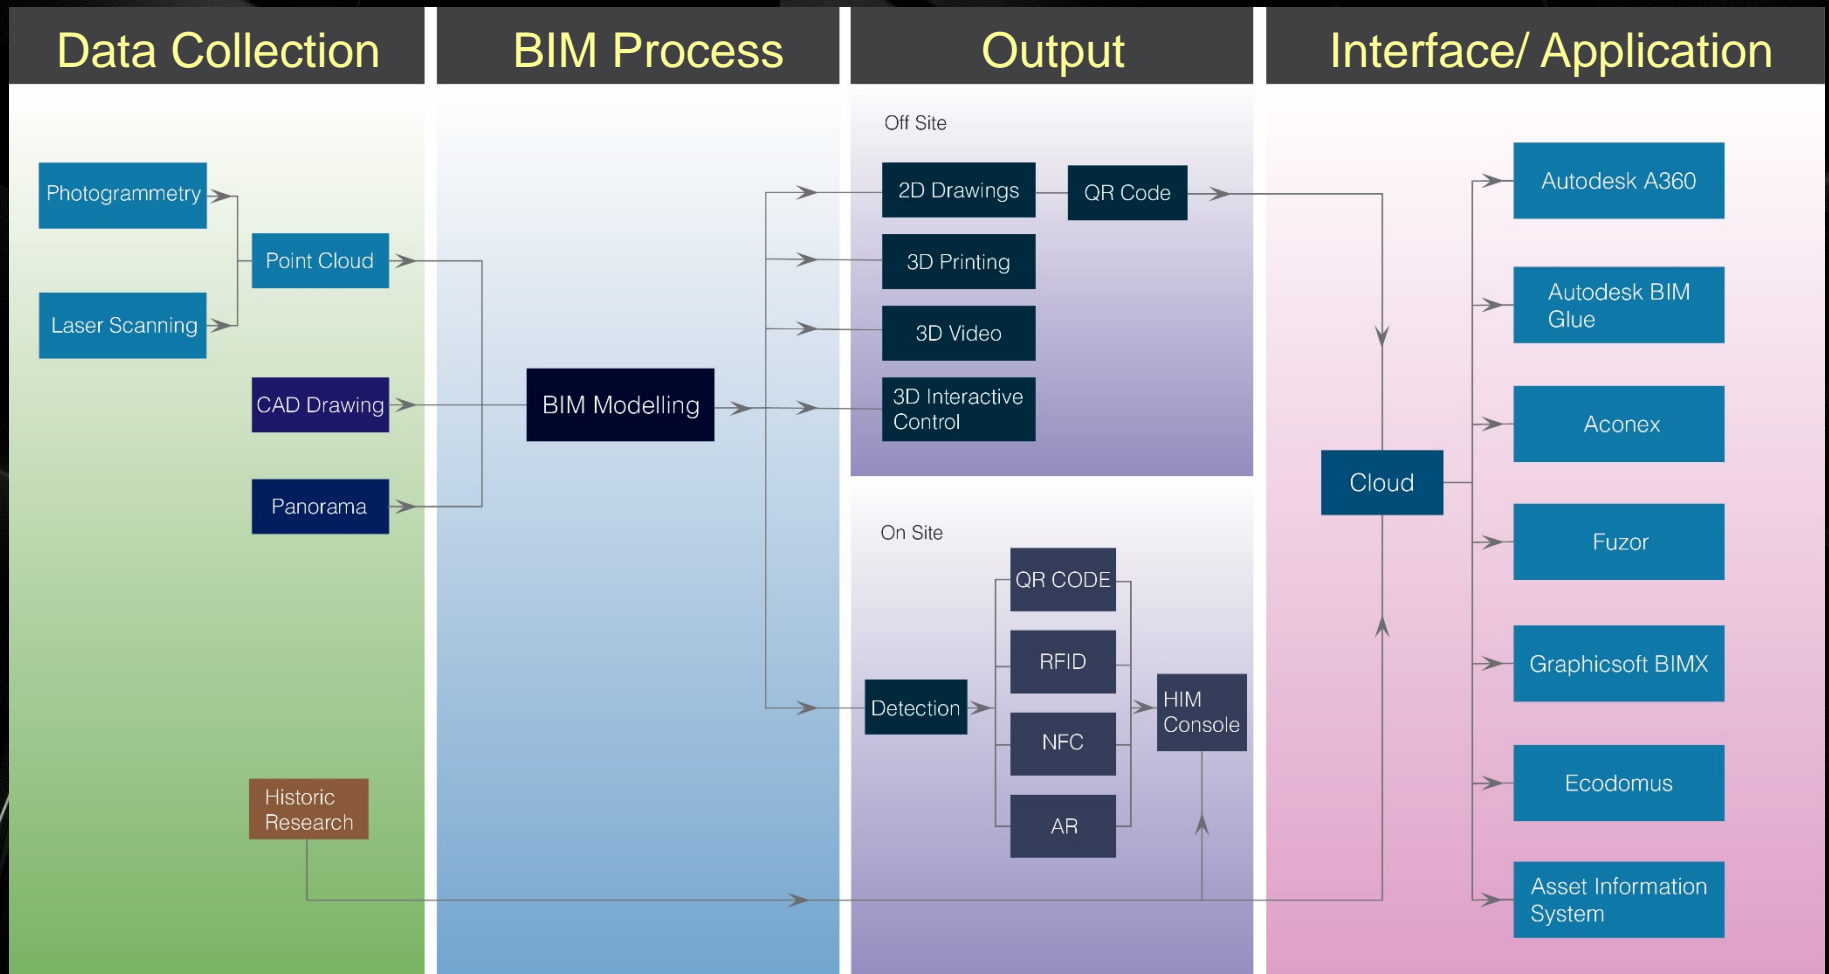

**David Fung**

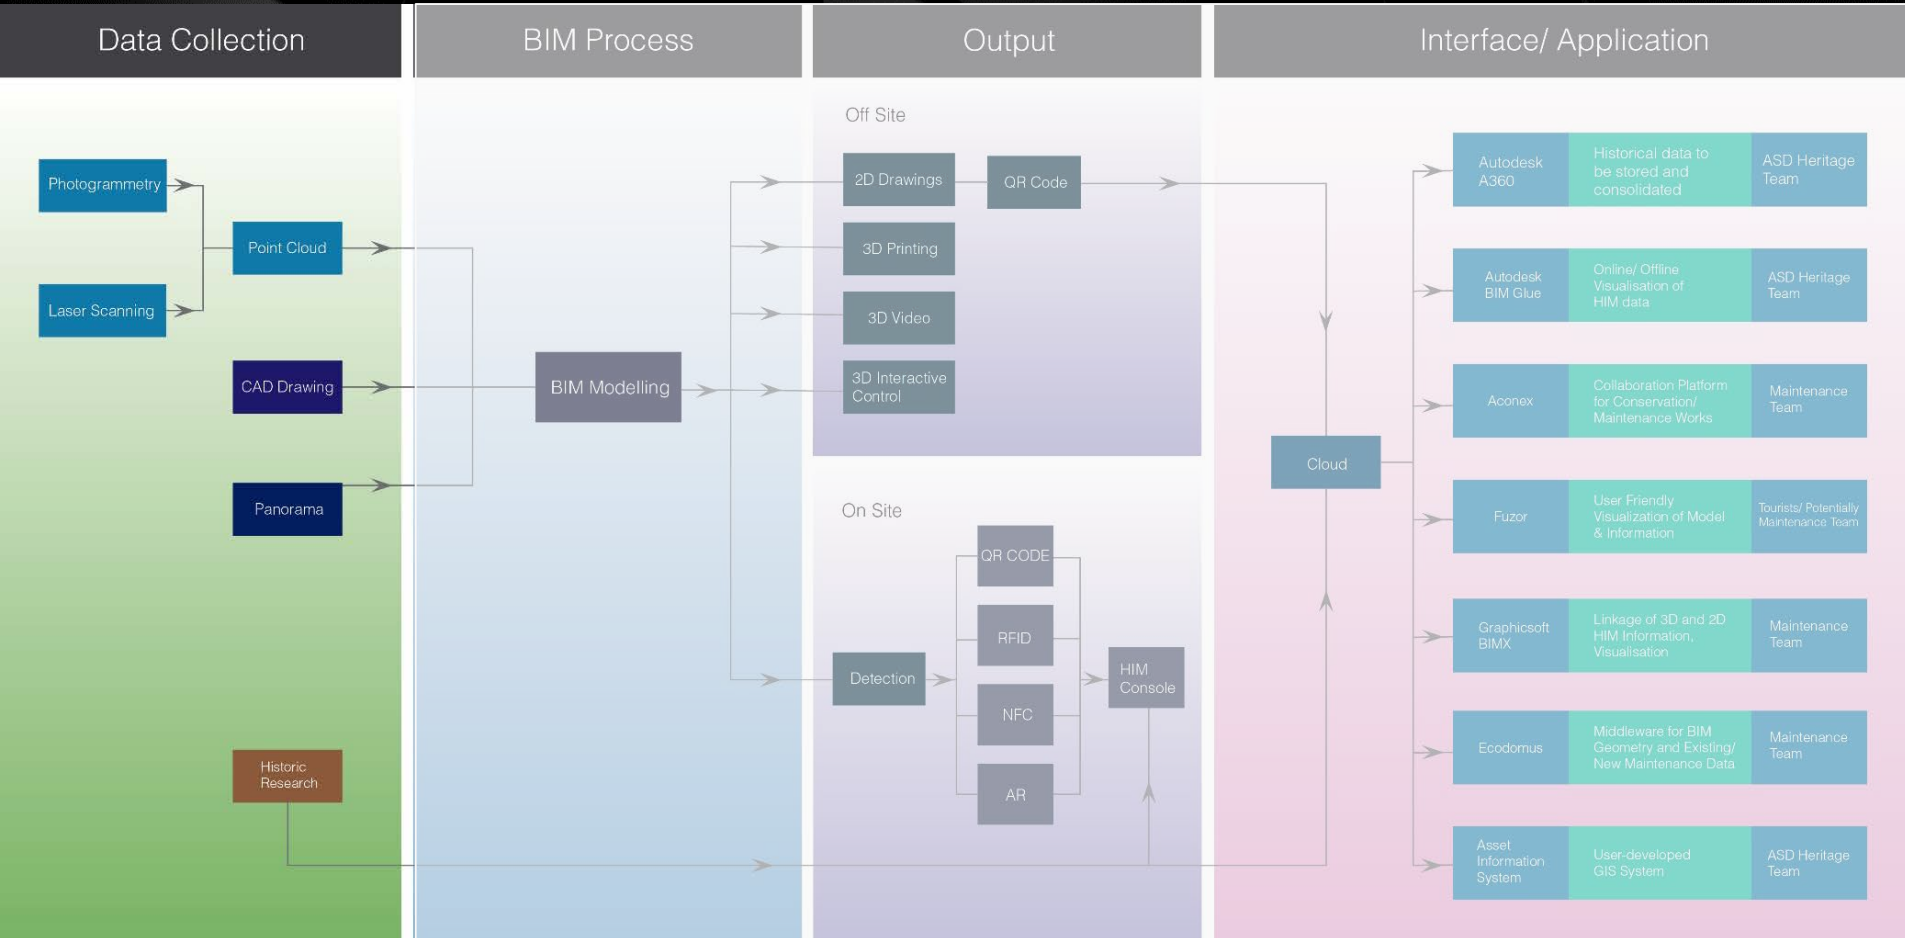

***Registered Architect, HKIA  
Managing Director, A.C.I.D.  
HKIBIM Chairman  
HKUSPACE Department of Architecture, BIM Course Director***

# New Projects/ Assets

# Existing Assets

## Data Collection

- Point Clouds (Photogrammetry and Laser Scanning)
- O&M Manual, Product Catalogue, Warranty, and etc.
- Other Existing Information
  
- As-built CAD drawings
- Site Photos – Panorama
- Traditional Site Photos

## Photogrammetry

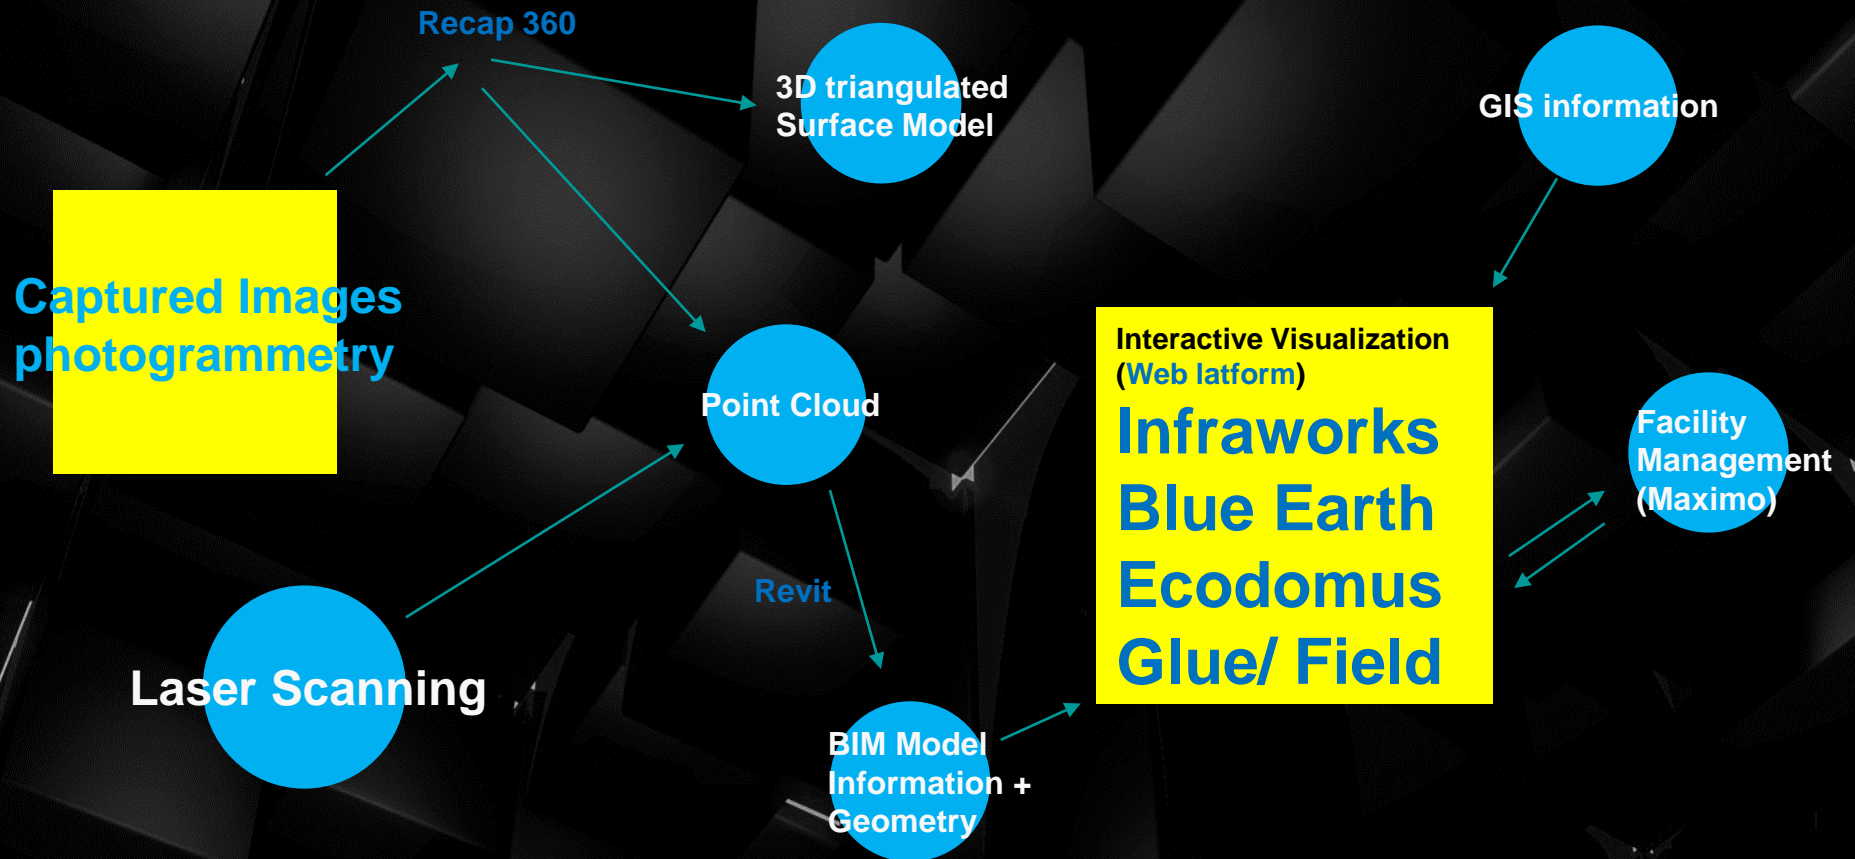

- Unmanned Aerial Vehicle (UAV)
- Take aerial photo of VPFS and its surrounding
- High resolution camera
- Autodesk Recap 360 - Point Cloud generation
- Calibration with geo-information and dimensions from Laser scanning

- By using the environment...

Laser Scanning

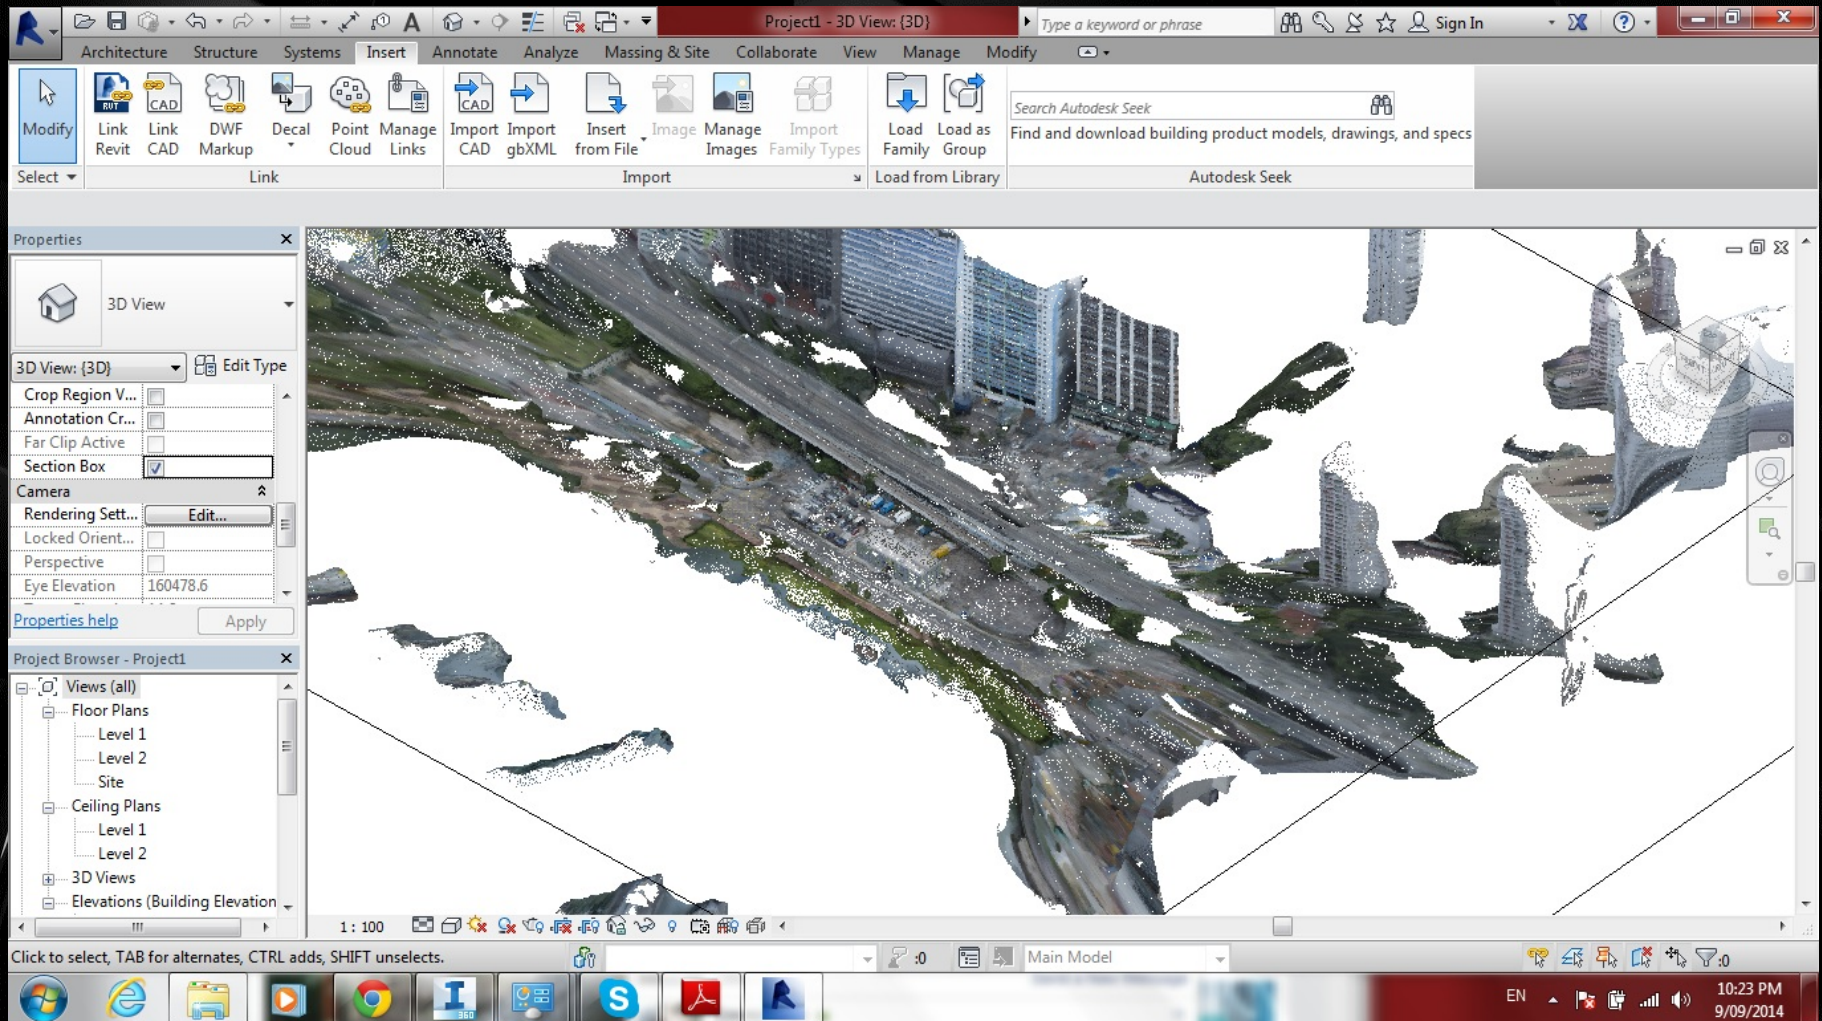

Captured Images  
photogrammetry

## Turn into Point Cloud

# Point Cloud to BIM

- Or give a bird's eye view of the setting

## Turn into Point Cloud

## Close Range Photogrammetry

RENDERING

BIM MODEL

POINT CLOUD

REALITY

## Laser Scanning

- Collecting accurate dimensions
- Widely used in Civil Engineering
- Quick, efficient, accurate and precise
- Resulting point cloud with true co-ordinates and above sea level
- Internal and External Scanning of VPFS

## Laser Scanning

## Laser Scanning

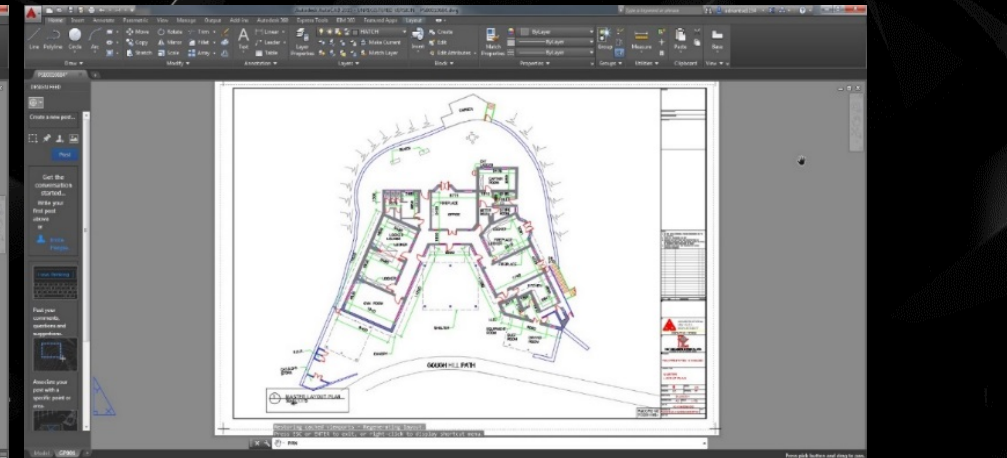

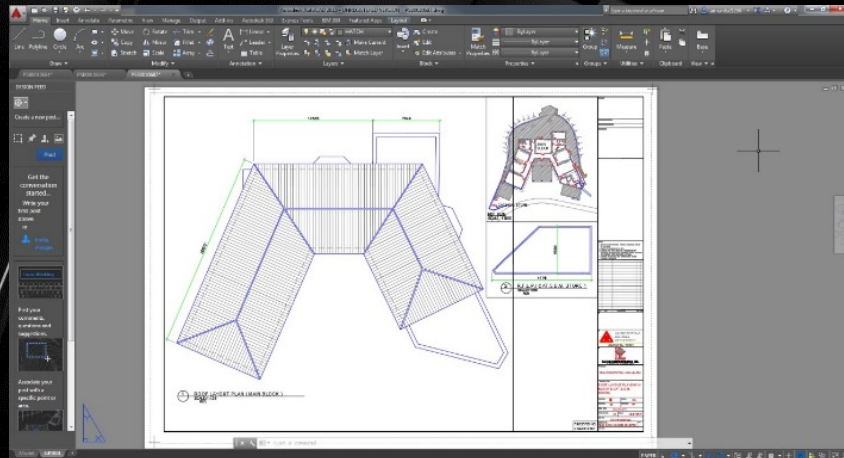

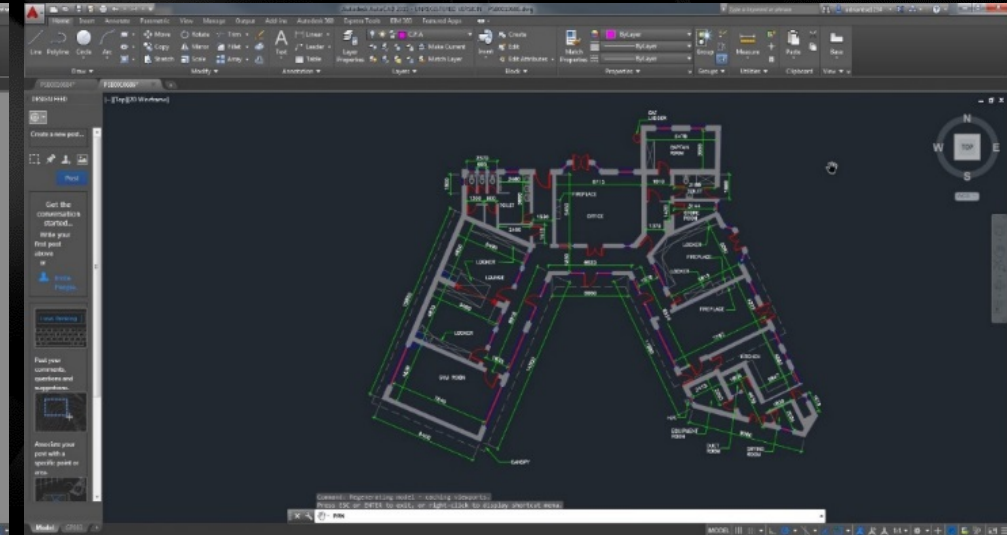

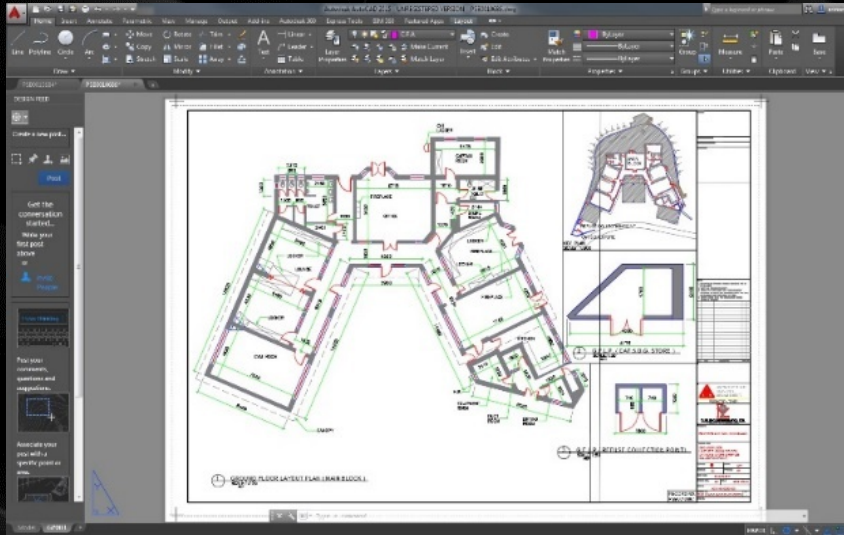

## Laser Scanning

## CAD Drawings

## BIM Process

## Output

- Off Site
- 2D & 3D Drawings with Time factors + QR Code
- Fuzor: Interactive Control and 3D Video
- On Site - Detection
- Near Field Communication (NFC)
- Radio-Frequency Identification (RFID)
- Augmented Reality (AR) with different tracking methods

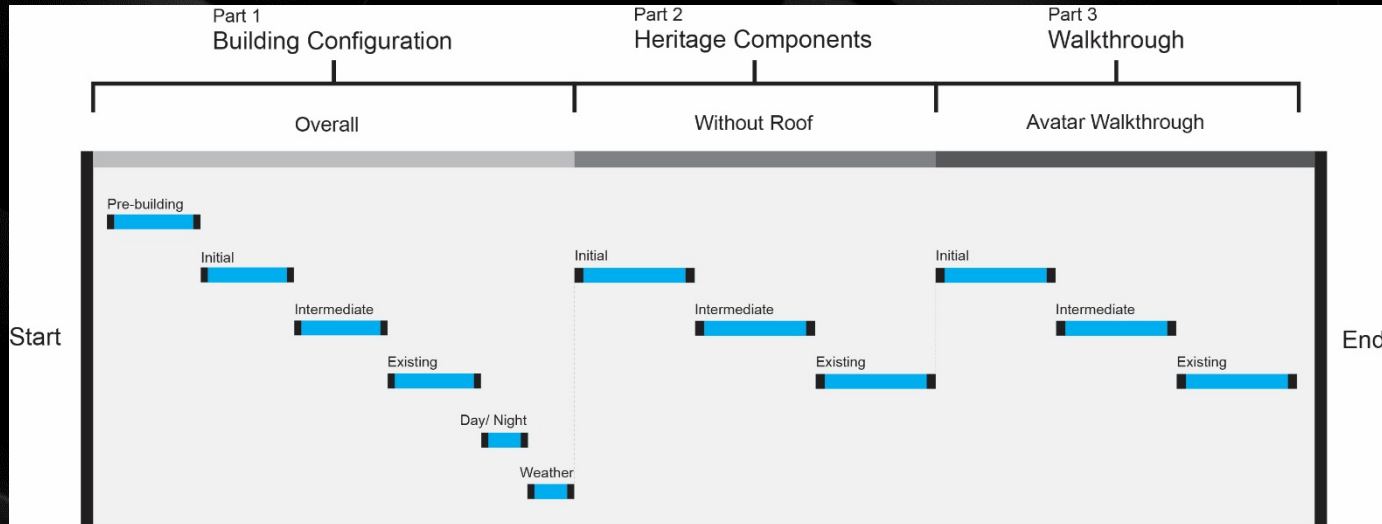

## Output (Off-site) - 2D Drawings

## Output (Off-site) - 3D Printing

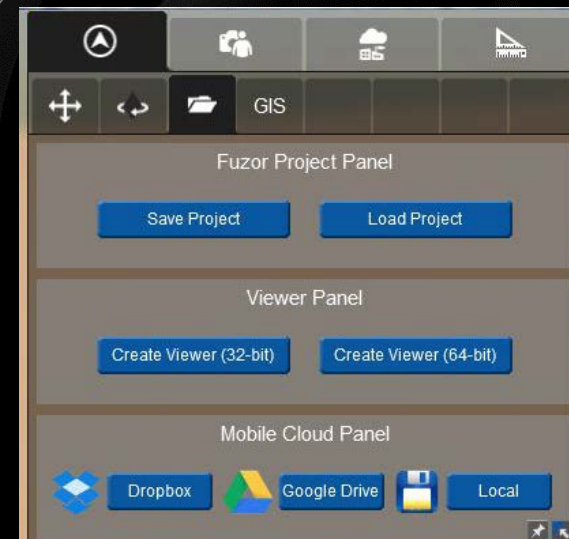

## Output (Off-site) - 3D Video

## Output (Off-site) - 3D Video

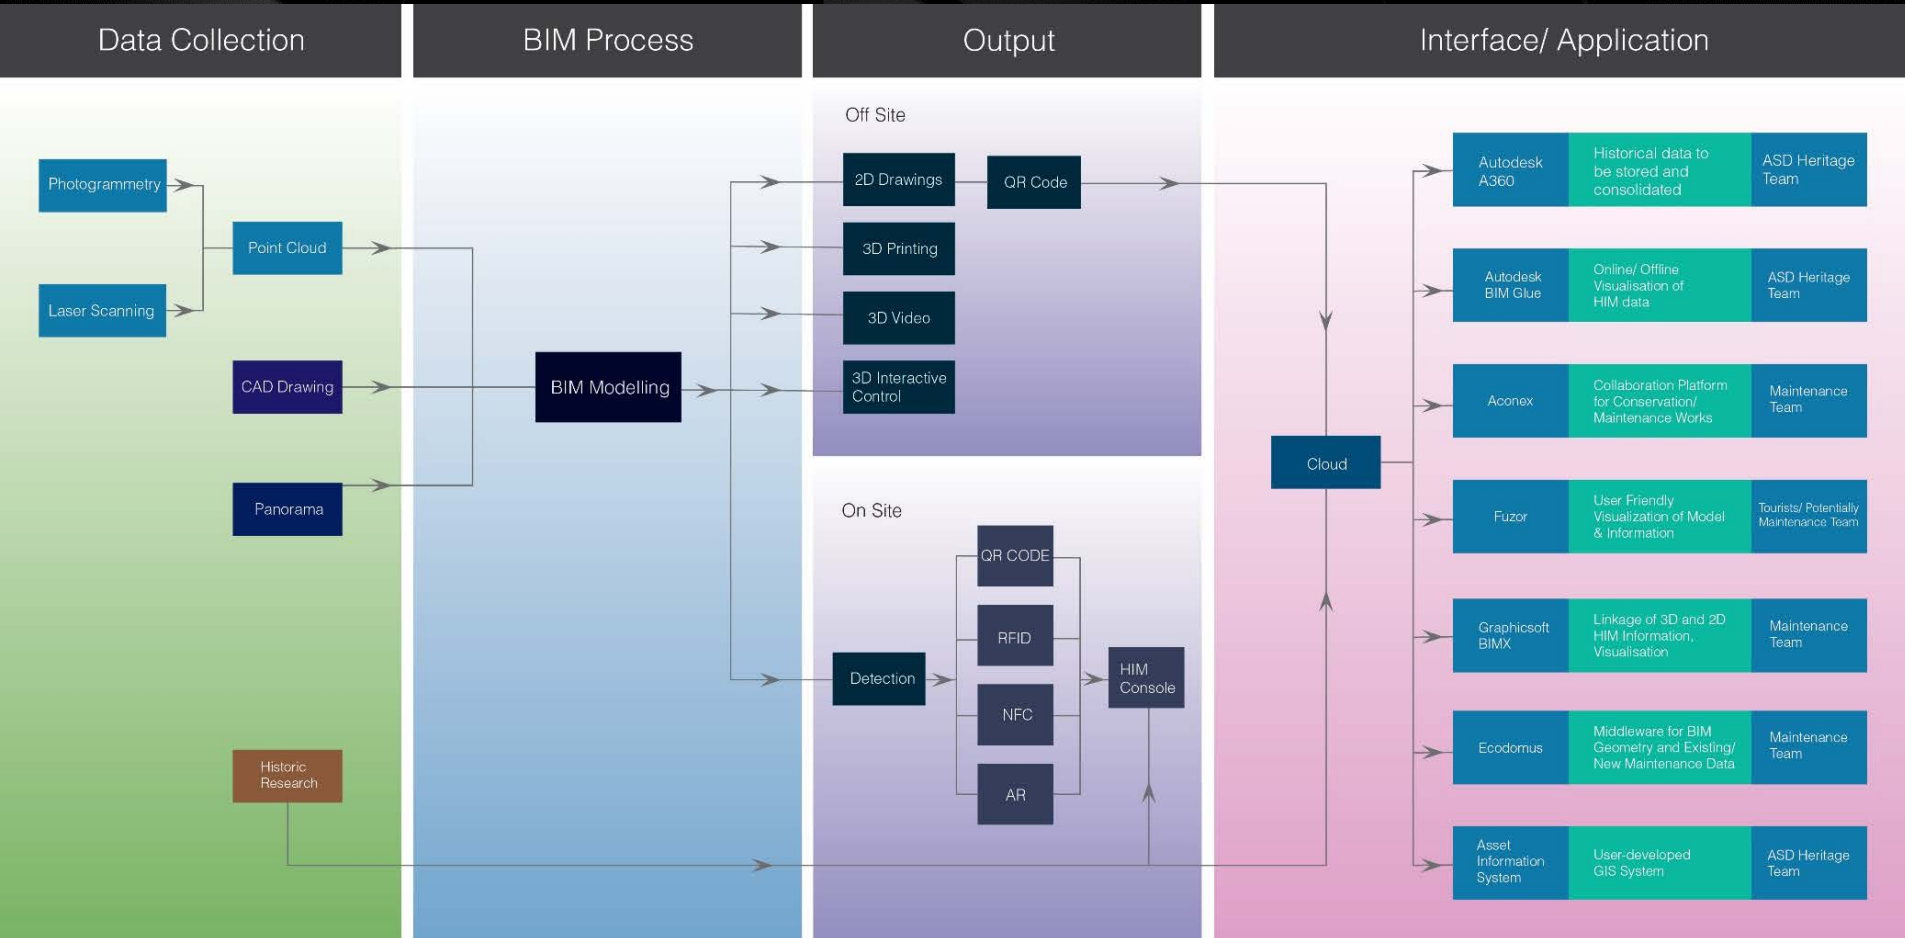

## Output (Off-site) - 3D Video

## Output (Off-site) - 3D Interactive Control

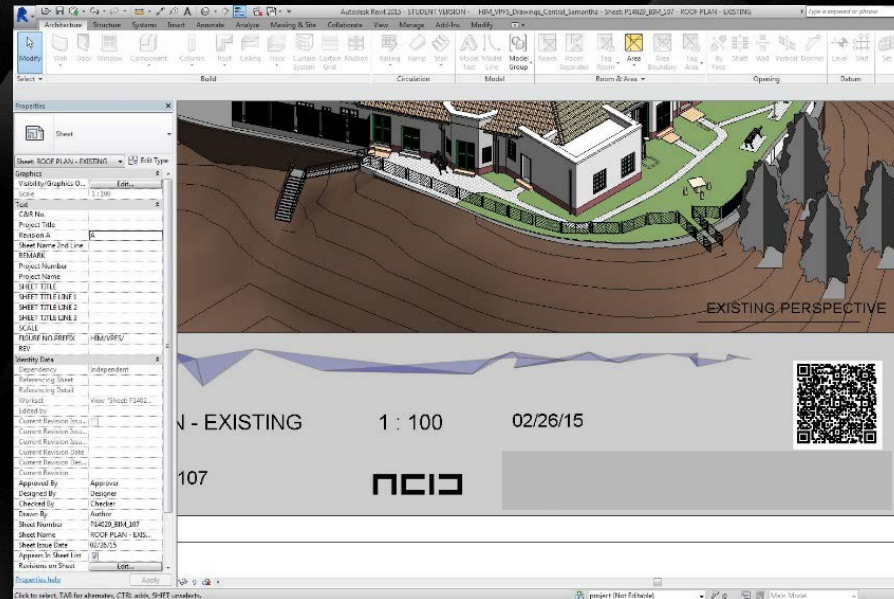

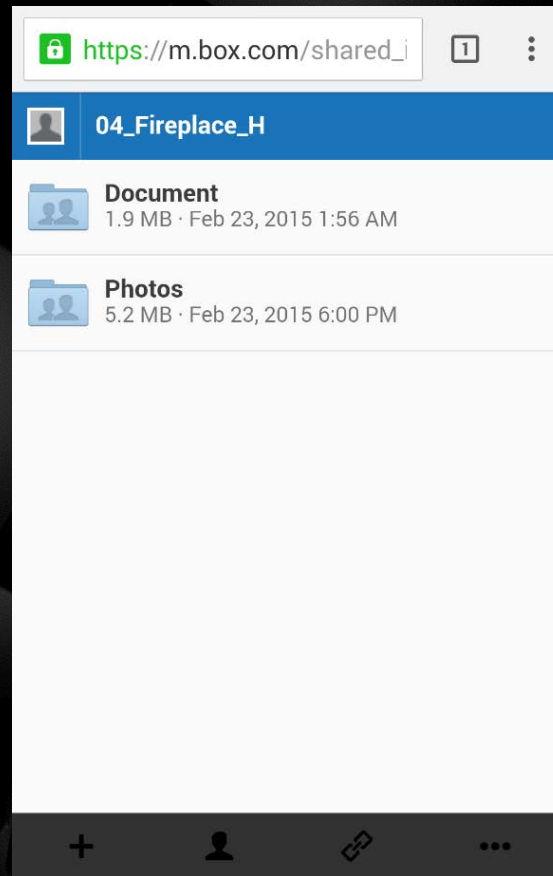

## 2D & 3D Drawings with Time factors + QR Code

- Traditional Plans, elevations and Sections can be generated with ease
- 3D presentation such as hiding elements, making elements transparent or temporary exploding different components
- Incorporating a unique QR Code at each individual drawings brings the 2D and 3D representations together

## Output (On-site) – Detection - QR Code

## QR Code on Drawings

## Output (On-site) – Detection - RFID

## Output (On-site) – Detection - NFC

## NFC & RFID

- NFC
- Near Range Detection (5cm)
- is capable of two way communication
- be used for more complex interactions such as card emulation like Octopus Payment
- RFID
- Wide Range Detection (2-10m)
- One way wireless communication, typically between an unpowered RFID tag and a powered RFID reader
- Asset tracking in warehousing, Airport baggage handling, Livestock identification, etc.

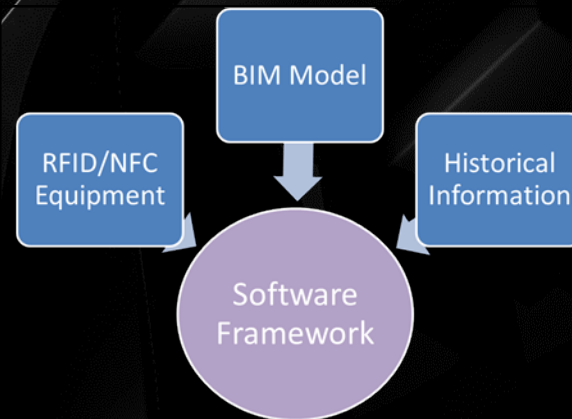

## NFC & RFID (Cont'd)

RFID & NFC technologies comparison table		
	UHF RFID	NFC
Frequency	800/960Mhz	13.56Mhz
Standards	EPC Gen2	ISO14443A
Communication	1 way	2 way
Reading Rang	2m ~ 10m	5cm
Scan Tags Simultaneously	Yes	No

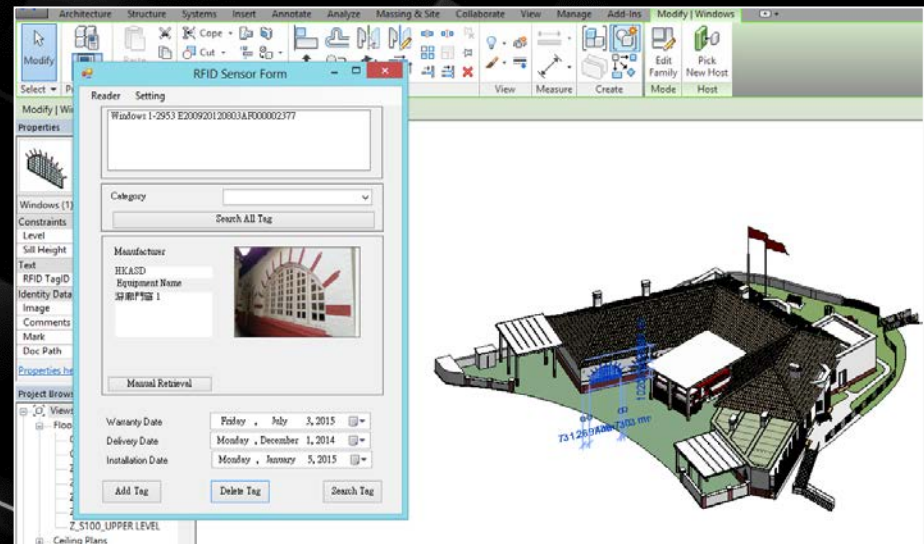

## NFC & RFID (Cont'd)

- Software Framework
- Integrate NFC/RFID and BIM by means of the application programming interface (API)
- Revit plug-in software module connect with the RFID/NFC Reader API with a data file

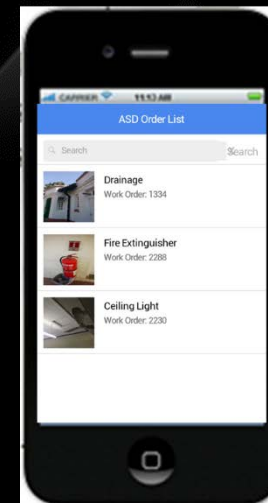

## NFC & RFID (Cont'd)

- Provisioning
- Create an Element Id directly in Revit API
- Associate a unique integer value to the new Element Id
- Associate the ID with the RFID/NFC tag Id directly

## NFC & RFID (Cont'd)

- NFC for Facility Management Mobile Application
- Android mobile application
- Information is retrieved from and input to the system in the back office manually
- NFC tag
- Staff can submit the inspection report and photo on site

## Output (On-site) – Detection - AR

## Augmented Reality

- Augmented Reality is a live direct or indirect view of a physical, real-world environment whose elements are augmented by computer-generated sensory input such as sound, video, graphics or GPS data.
- Mobile augmented reality systems use tracking technologies, such as:
  - Digital cameras and other optical sensors,
  - Accelerometers,
  - GPS,
  - Gyroscopes,
  - Solid state compasses,
  - RFID and wireless sensors
- These technologies offer varying levels of accuracy and precision.

## Augmented Reality

## AR (Cont'd)

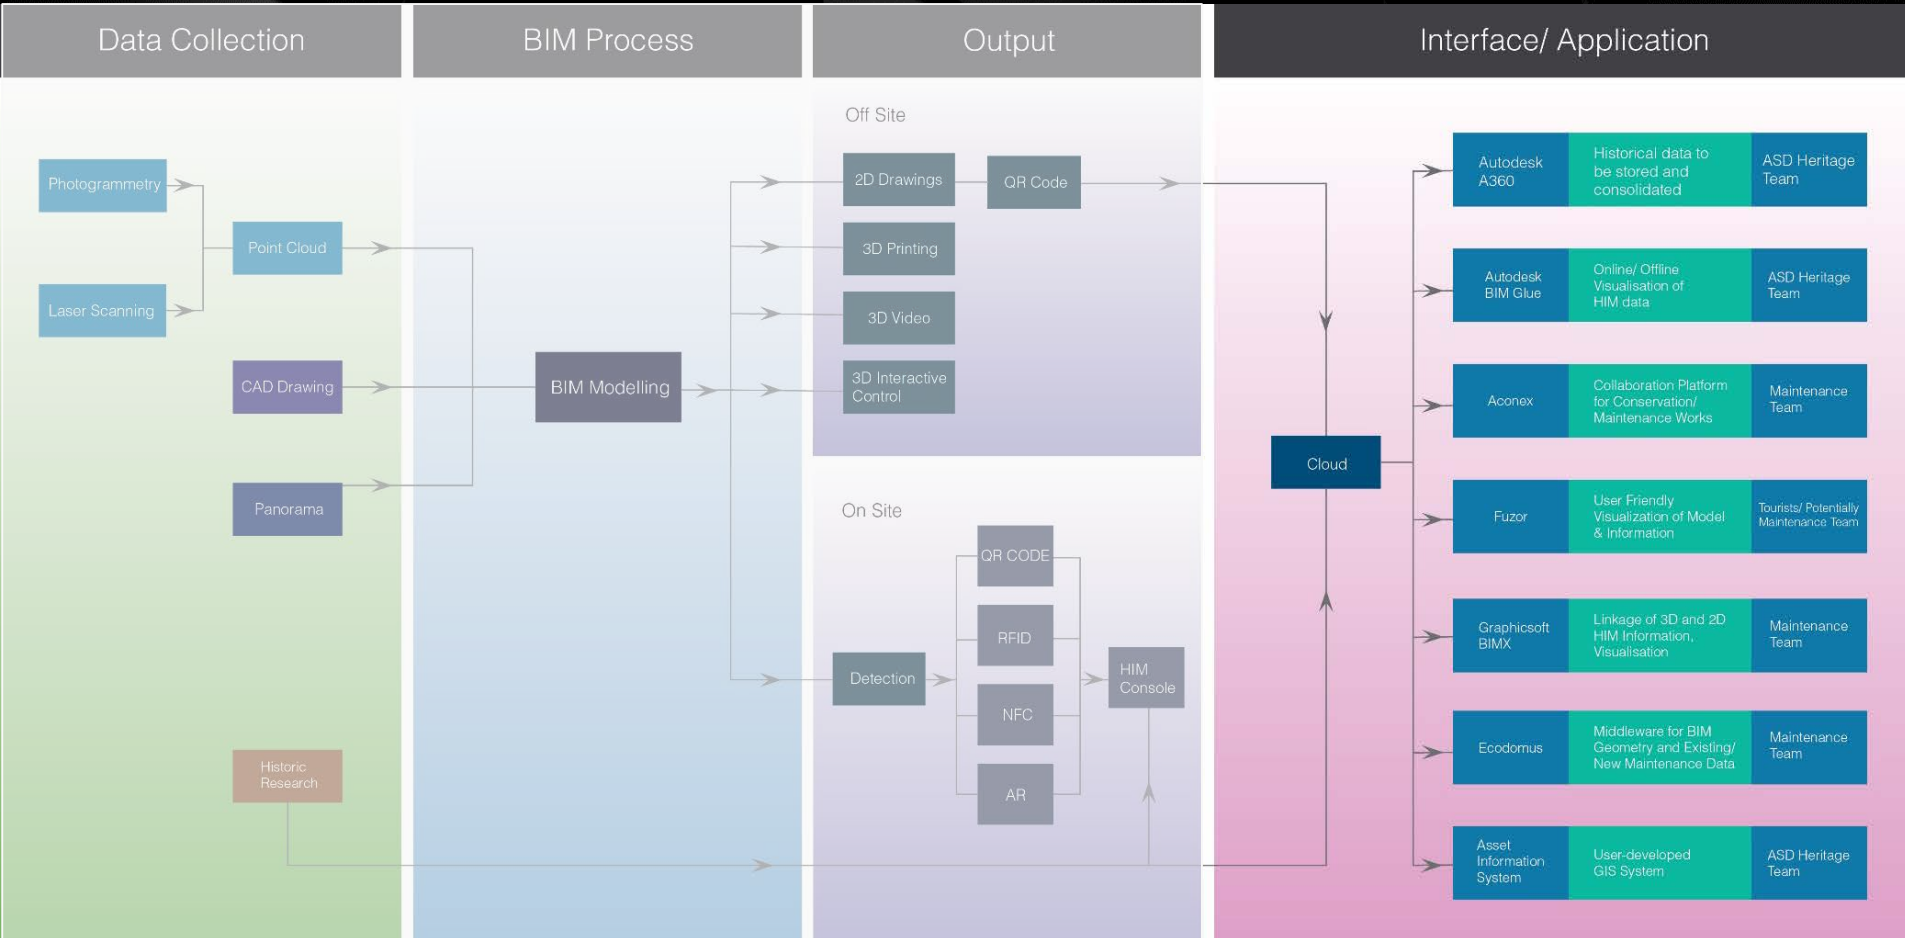

- Various technologies are used in Augmented Reality rendering including:
- Optical projection systems
- Monitors
- Held devices
- Display systems worn on one person

## AR (Cont'd)

- Tracking Methods:
  - ❖ Display the building changes
  - Outdoor positioning using Geographic information system(GIS)
  - ❖ Display the unseen partition (Roof truss)
  - Indoor positioning using Bluetooth Low Energy triangulation
    - ✓ iBeacon/Beacon
  - ❖ Extended image-based tracking
  - ❖ Object recognition and mapping

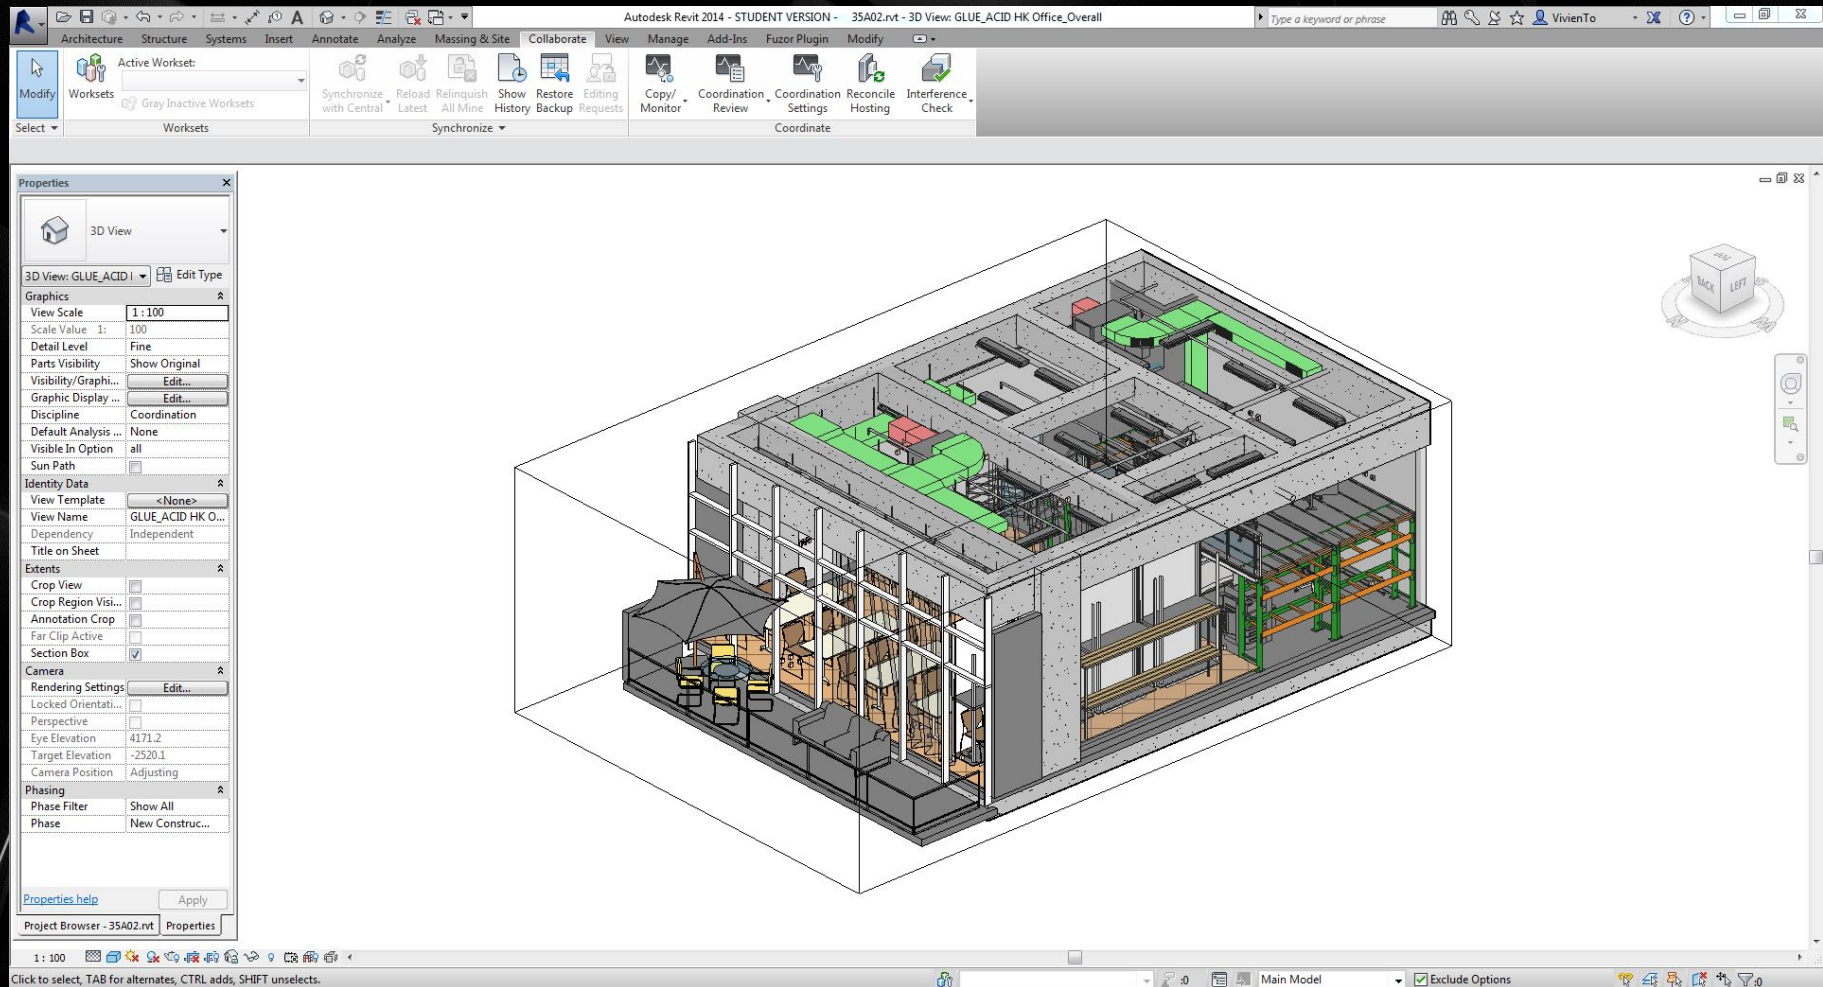

## Interface / Application

- Autodesk A360
- Autodesk BIM Glue
- Aconex
- Fuzor
- Ecodomus

## Ecodomus

The screenshot displays the Ecodomus software interface, which is a BIM (Building Information Modeling) tool. The main window shows a 3D model of a facility, likely a hospital, with various rooms and corridors. The interface includes a left sidebar with a tree view of the project structure, a top toolbar with various navigation and editing tools, and a right sidebar with a properties panel.

**Left Sidebar (Viewpoints):**

- 00-GENERAL VIEWS
  - 01-Exterior
  - 02-Queue
  - 03-Ridepath
  - 04-Catwalk
  - 05-BOH
    - 42-BOH Locker Room
    - 43-BOH Maintenance...
    - 44-BOH HPU 110
    - 45-BOH ER 112

**Top Toolbar:** Includes icons for navigation (pan, zoom, rotate) and editing (delete, copy, paste).

**Right Sidebar (Properties):**

PROPERTIES	
<b>Component</b>	
Name	Gate Valve
Description	Gate Valve
Asset Identifier	AE 5542
BARCODE	5426
<b>Type</b>	
Name	Gate Valve
Description	500 mm
Manufacturer	NIBCO

Room No. 3.3 - Cleaners' Room									
Function	A room for storage of small volume of cleansing materials, tools and short stay of cleaners								
Size	15 - 20 m <sup>2</sup>								
Occupants	3-5 persons								
Location	Non-public area								
Fire Rating	# In accordance with Fire Safety Standard for KTL/TWL/ISL Stations - S/ARC/PD/005								
Security Level	Low								
Finish	Floor		Skirting		Wall		Ceiling		
	Vitrified ceramic tiles, 150x150x8, on c/s screed - "Pilkington Dorset, colour Dark Grey" or equal approved; on liquid-applied waterproof membrane - "Lactierete 9235 with fabric reinforcement" or equal approved		Coved ceramic tiles, 150x150x8, on c/s backing - "Pilkington Dorset, colour Dark Grey" or equal approved; on liquid-applied waterproof membrane - "Lactierete 9235 with fabric reinforcement" or equal approved		Glazed ceramic tiles, 150x150x6.5, on c/s backing - "Pilkington Architectural Colours, colour Vellum White" or equal approved; Duralic paint on c/s render above 2100 high - "Alphadecor, colour 9010 White" or equal approved		Durable paint on fairface concrete - "Alpi adecor, colour 9010 White" or equal approved		
Door Set	Size	Fire Rating	Acting		Frame	Inside Finish	Outside Finish	Air Resistance	Others
	900 x 2100 mm	# (see above)	Swing In 90°		Painted/ S/S *	Painted/ S/S *	Painted/ S/S *	N/A	Durable kickplate to u/s of push plate
Ironmongery	Lock Set	Security Level	Access Card		Remote Control	Inside Handle	Outside Handle	Accessories	
	Night Latch	Low	No	No	No	Lever handle on back plate	Pull handle on back plate	Door closer, door stop	
Signage	Door Plate (supply by Ops)								
Environment	Temperature	Ventilation	Humidity		Acoustic		Thermal		
	24 °C A/C	N/A	50% ± 10%		NC 50		---		
Lighting	Normal Illuminance	Emergency Illuminance	Type		Diffusers		Source		
	300 Lux	10 Lux	Fluorescent, surface mounted		---		Direct		
Fire	Detection		Suppression			Extinguisher		Smoke Extraction	
	Smoke Detectors		N/A			Relocate existing		---	
Plumbing & Drainage	Water Supply				Drainage				
	Yes				Yes + Floor drain				
E & M, C & C	Equipment		Socket Type			Socket No. / Location		Communications	
	PABX (no outside call feature)		RJ11 provided by in-house C&C			1 / At 1440mm AFFL		Telephone wire to MTRC distribution box	
	General		Twin 13A			2 / Skirting level		---	
Fixtures & Furniture	Shop sink connect to foul drainage, storage cabinets, lockers, vacuum cleaner, table and chair.								
Others	---								

\* Dependent on location - stainless steel door to be used when facing public areas.  
- painted doors to be used when facing Both areas.

# Possible Marketing Management

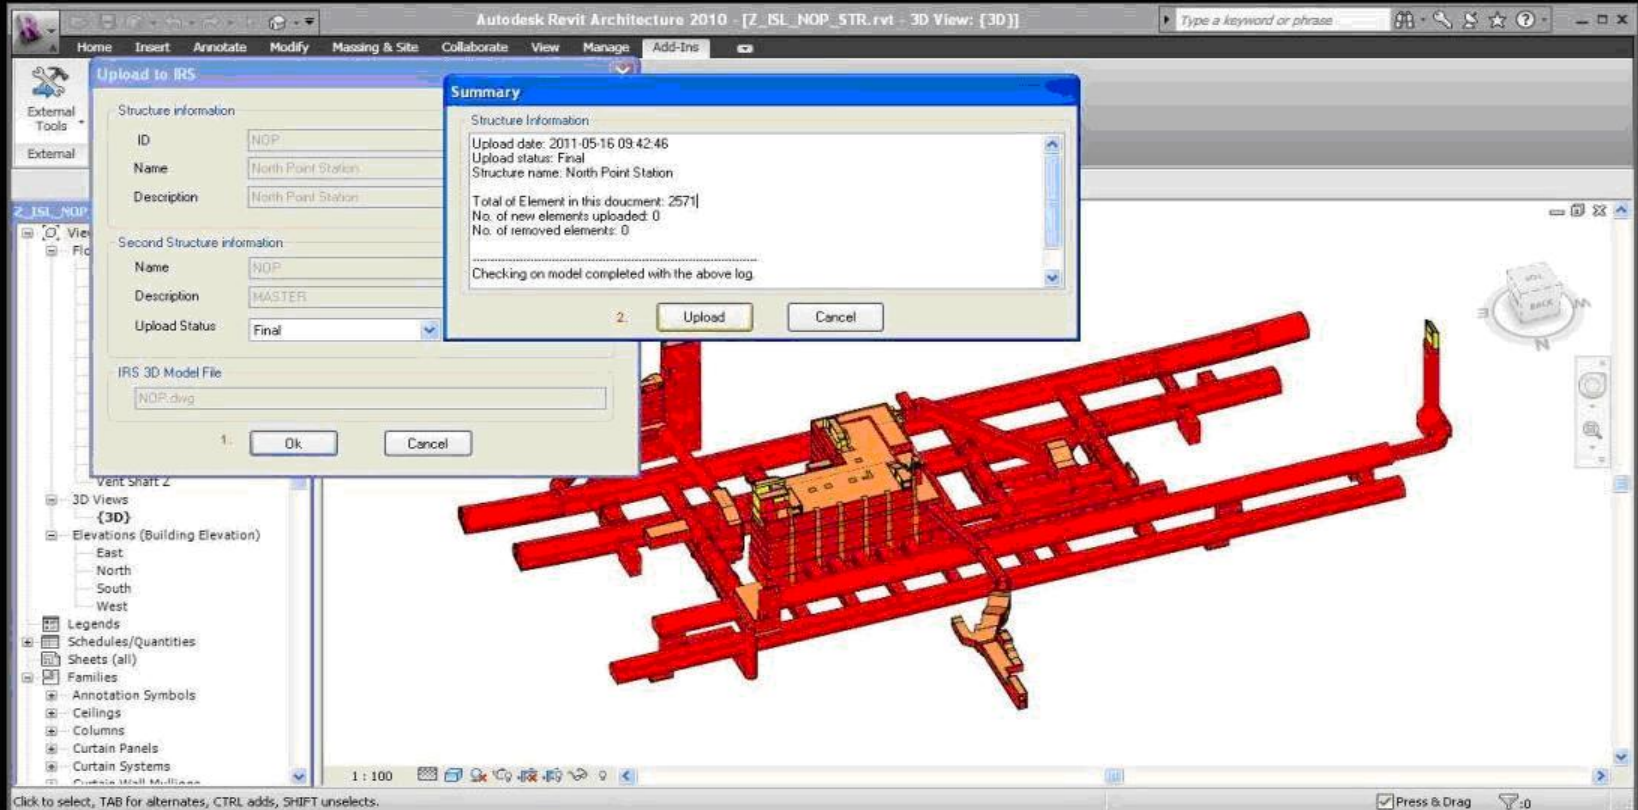

## Possible Marketing Management

NCIO

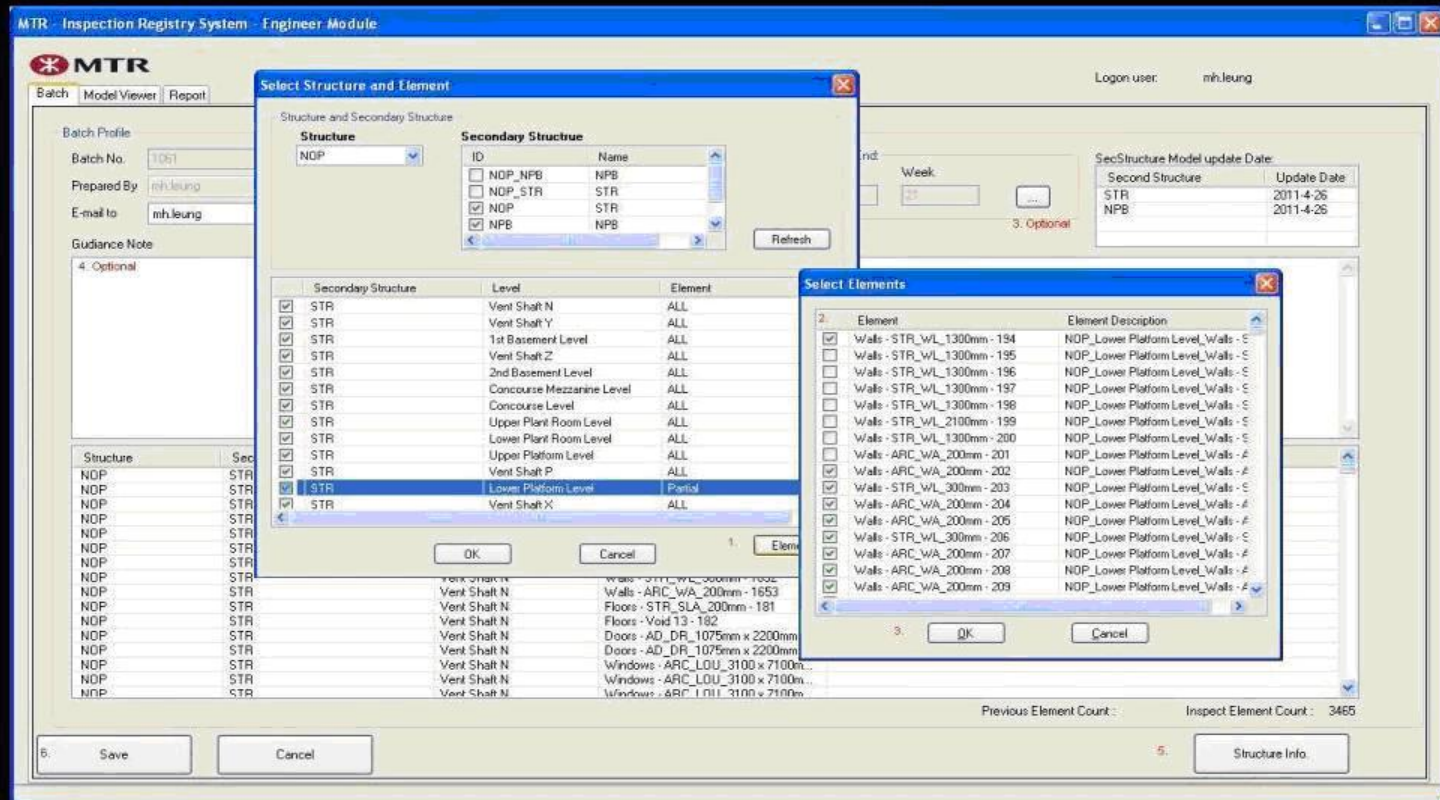

## 1. BIM model preparation

With the help of the Revit application, 3D model of the station structures with detail attributes are prepared. This is the starting point for the lifecycle of the inspection process. After that, the 3D model will be uploaded to the central system server by using customized Revit plug-in to complete the BIM model preparation process.

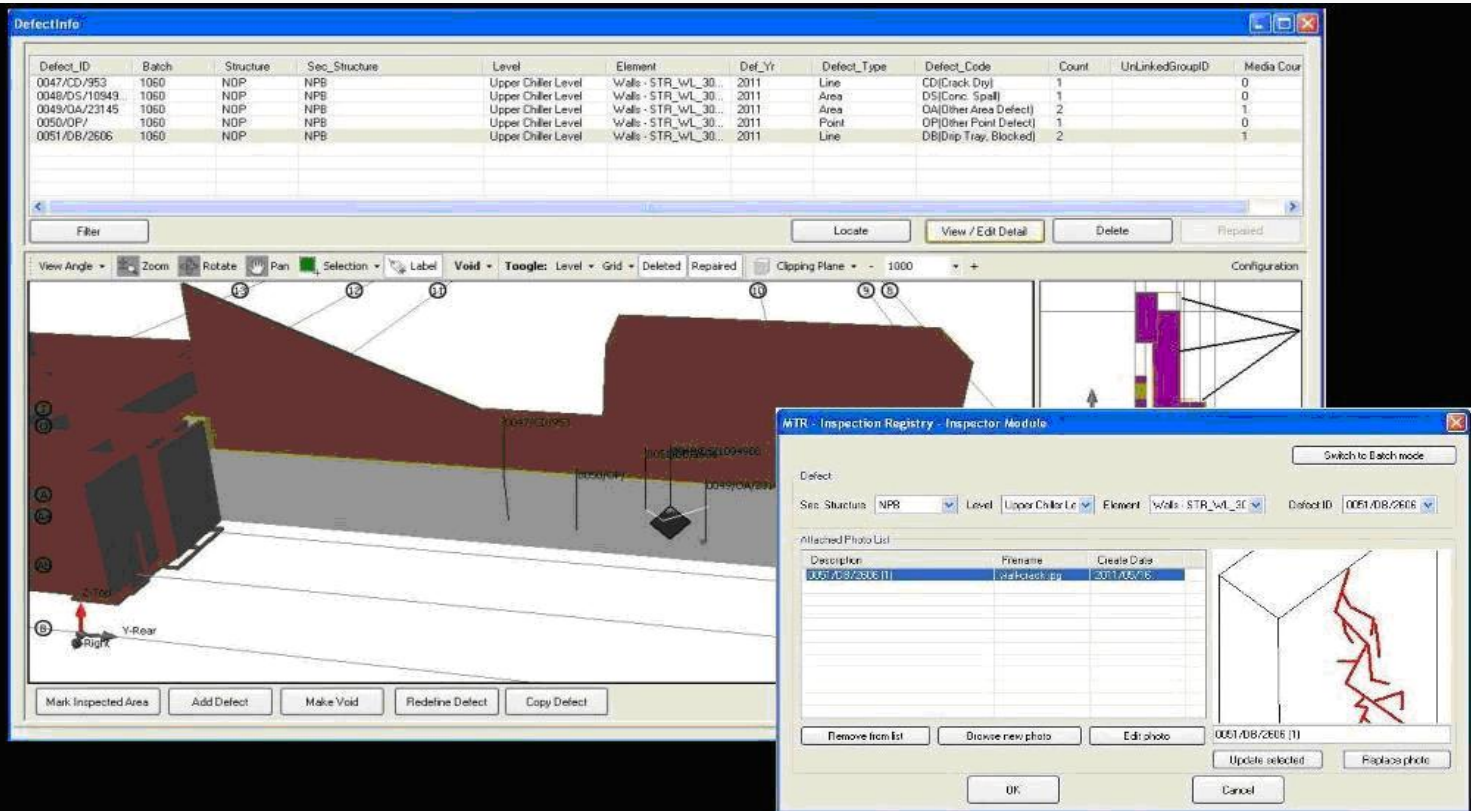

## 2. Creating inspection order

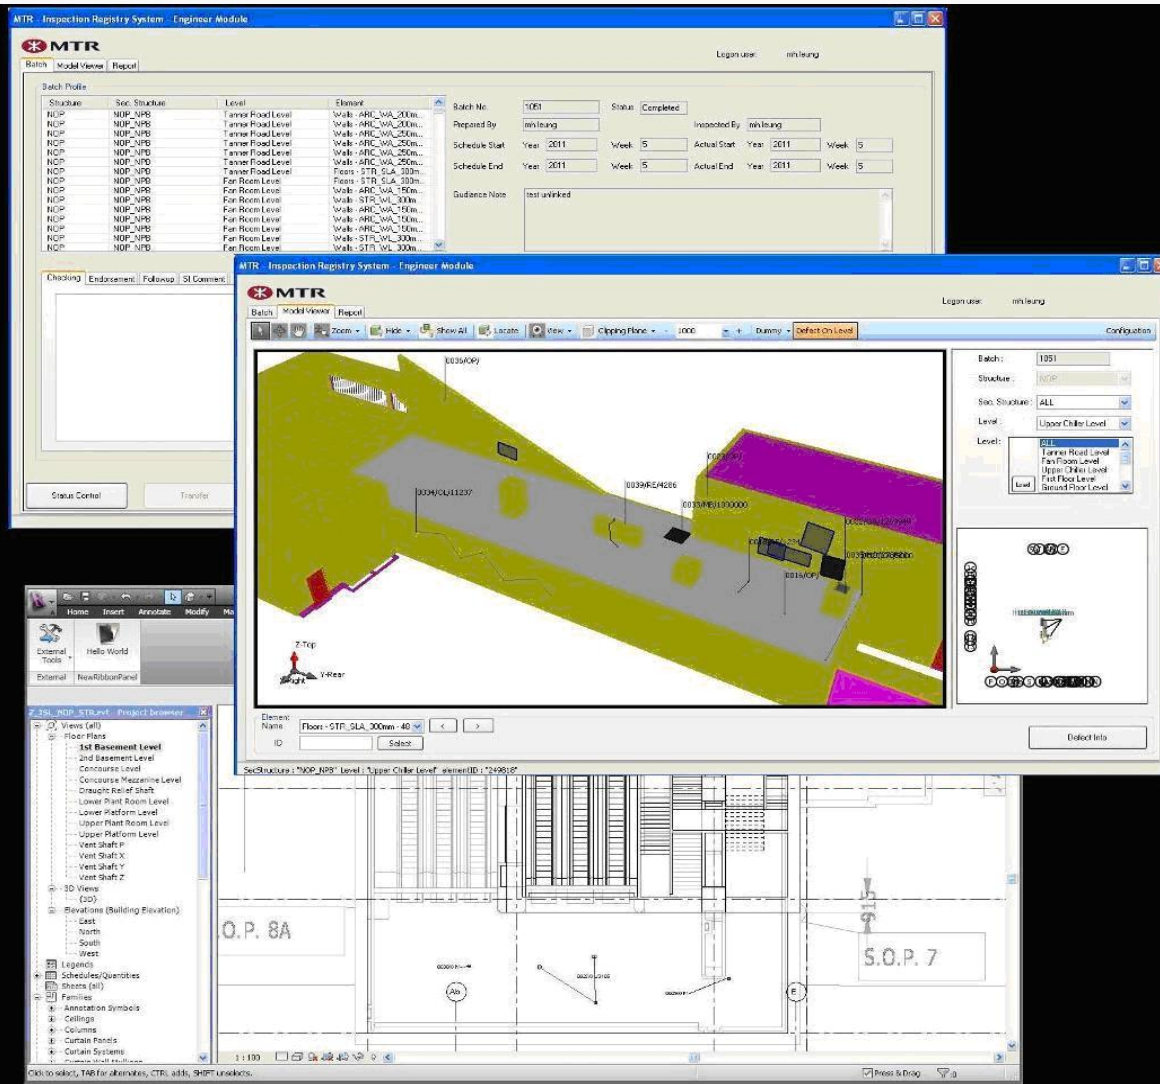

The second stage of process is creation of inspection order by Engineers. Previously prepared BIM model will be the targeted structure for inspection. Relevant parameters including levels to be inspected, inspection schedule, and responsible Inspector will be assigned in this stage.

### 3. Inspection inside the 3D world

On-site inspection using handheld device will be performed by Inspectors after order assignment. Inspector will make use of the 3D model viewer to perform defect reporting and photo taking. Eventually, all reported defect will be uploaded to the system for Engineer's vetting process.

#### 4. Vetting and follow Up

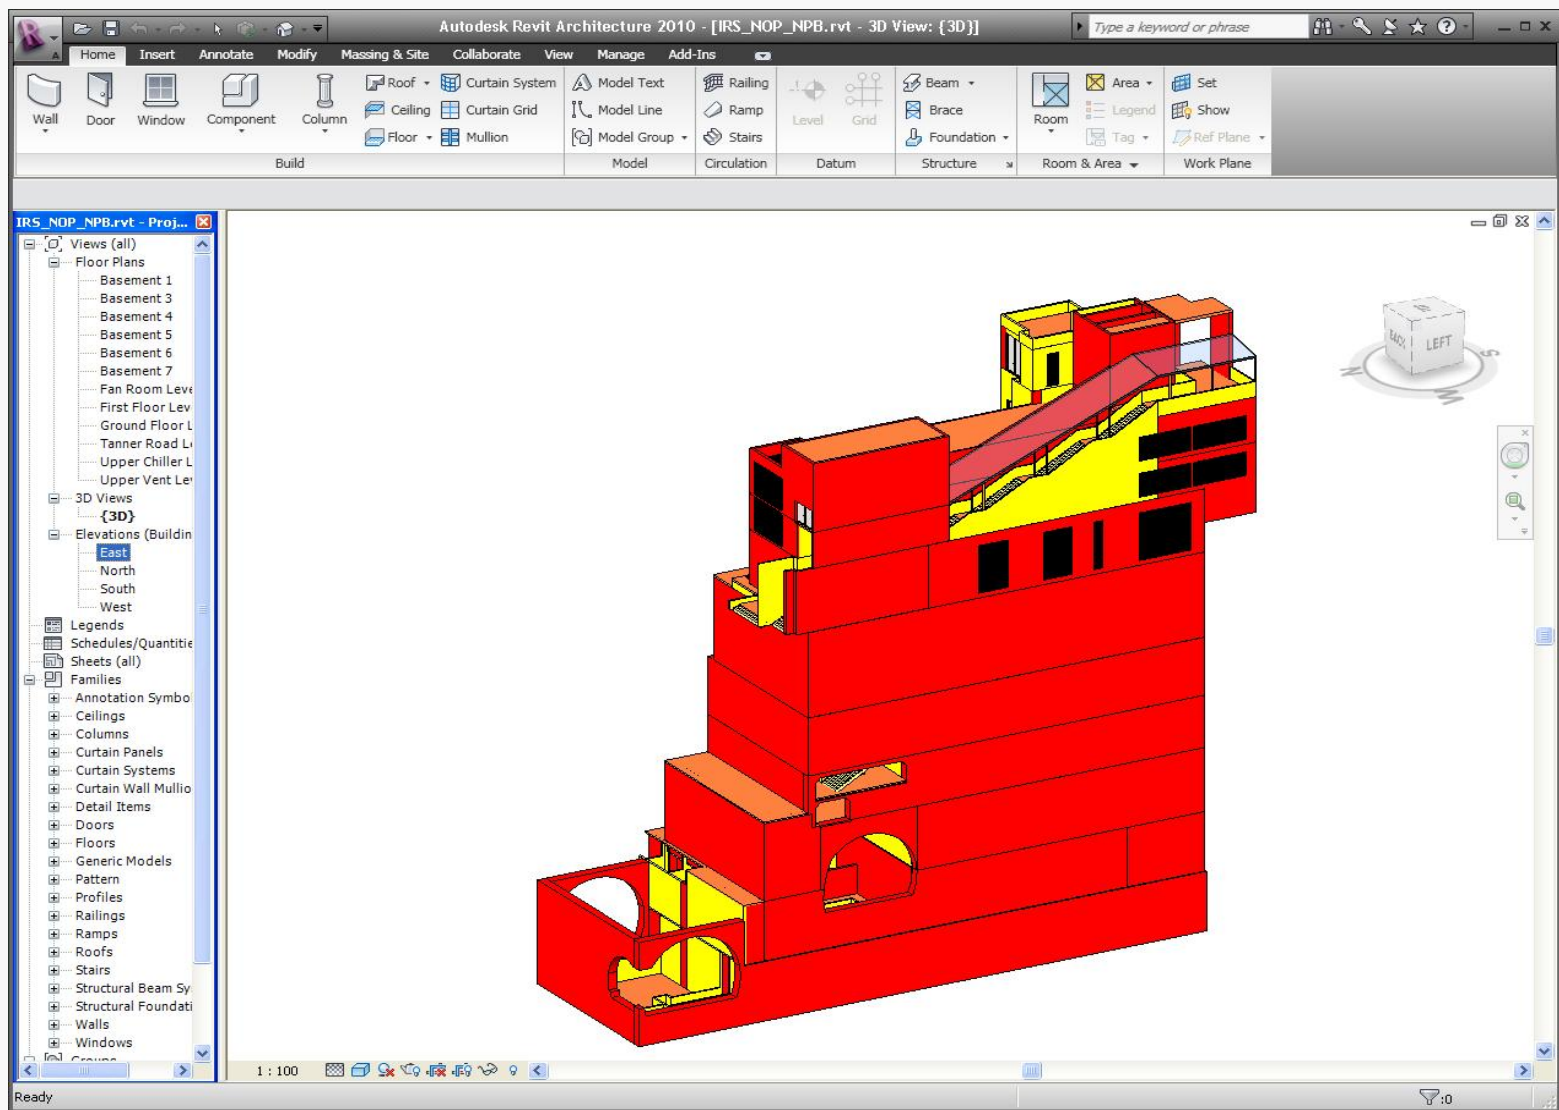

Upon Inspector completed inspection, Engineer can check the inspection result in the same 3D model. Report and layout printing showing the defect distribution can be generated as needed.

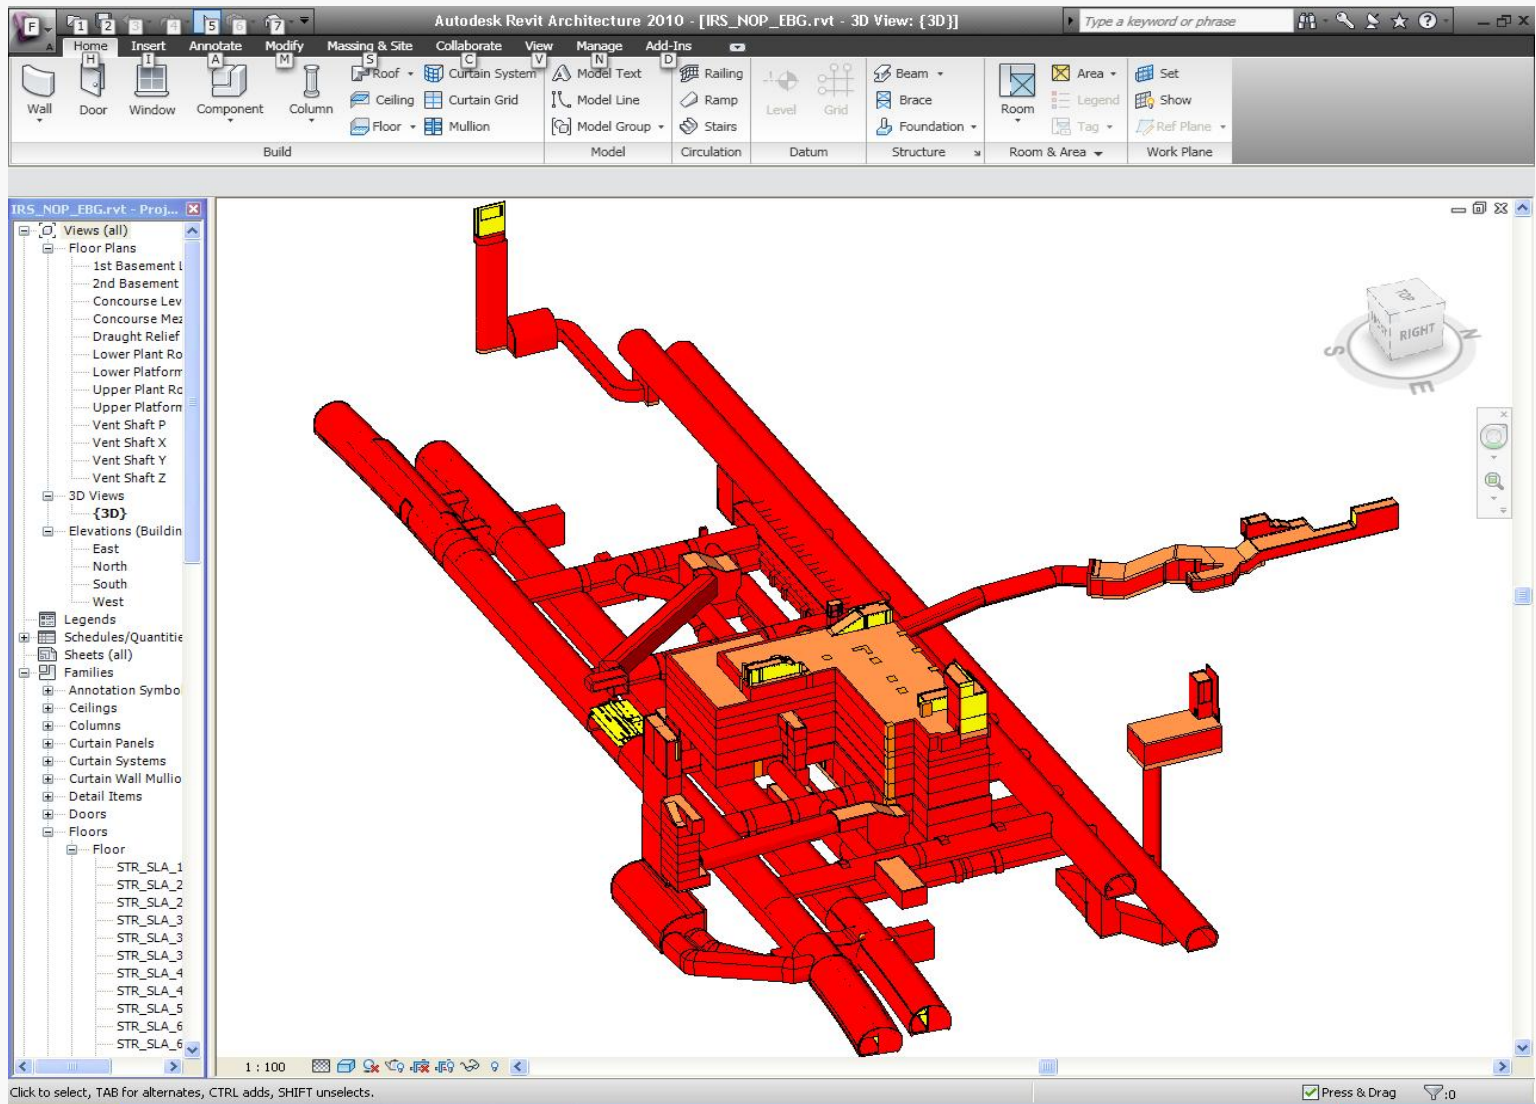

## 5. BIM model adjustment and checking

During the stage of on-site inspection, Inspector could also report discrepancy found between the BIM model and actual situation (modification, additional facility / feature, etc.). All information can be retrieved and displayed in BIM model inside Revit application thru the customized Revit plug-in tool. The BIM model can then be updated and reload back to IRS system.

Batch Model Viewer Report

Logon user: irsadmdv

Navigation toolbar: View, Rotate, Pan, Zoom, Hide, Show All, Locate, View, Clipping Plane (set to 1000), Dummy (Show/Hide).

## Project "AR4BC"

### Augmented Reality for Building and Construction

- Compare project plans (4D BIM) with situation on site
- Provide real time mobile feedback from site to BIM system
- Client/server system - scalable even to mobile phones

### Building Information Models (BIM)

# Beyond BIM – Augmented Reality

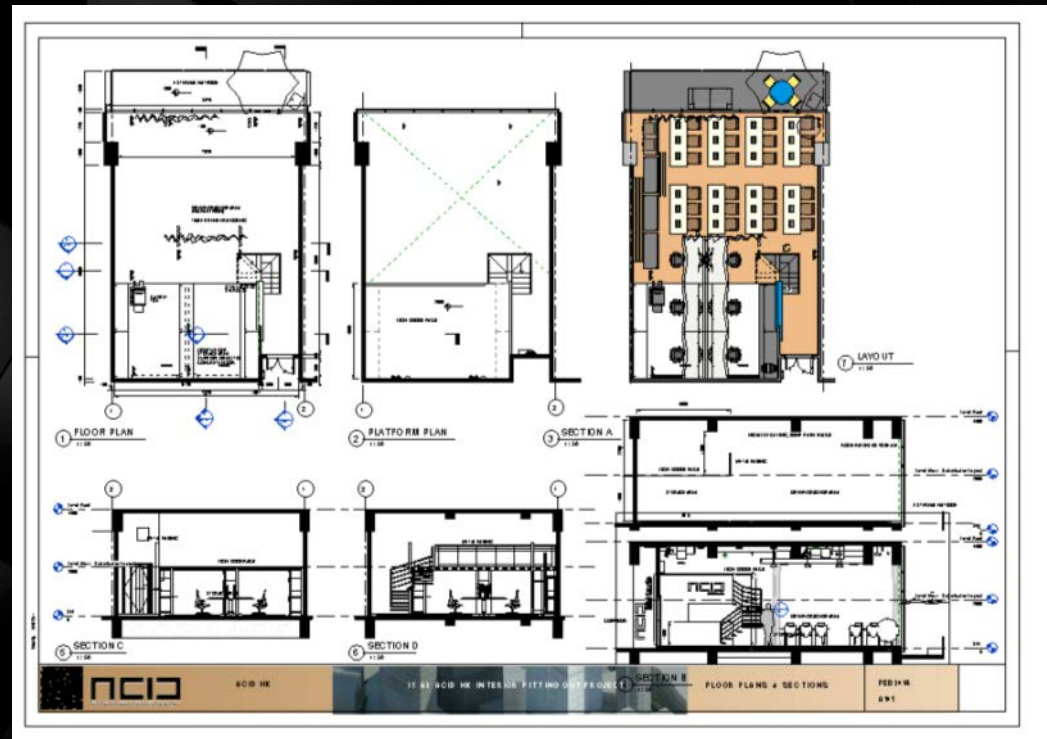

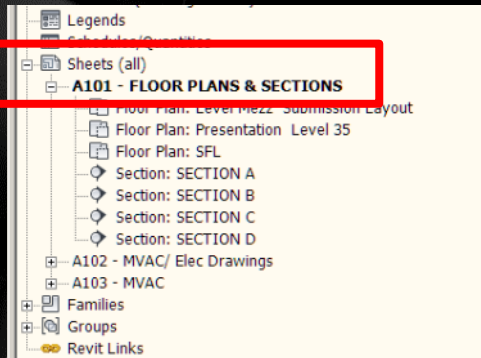

# Beyond BIM – Augmented Reality

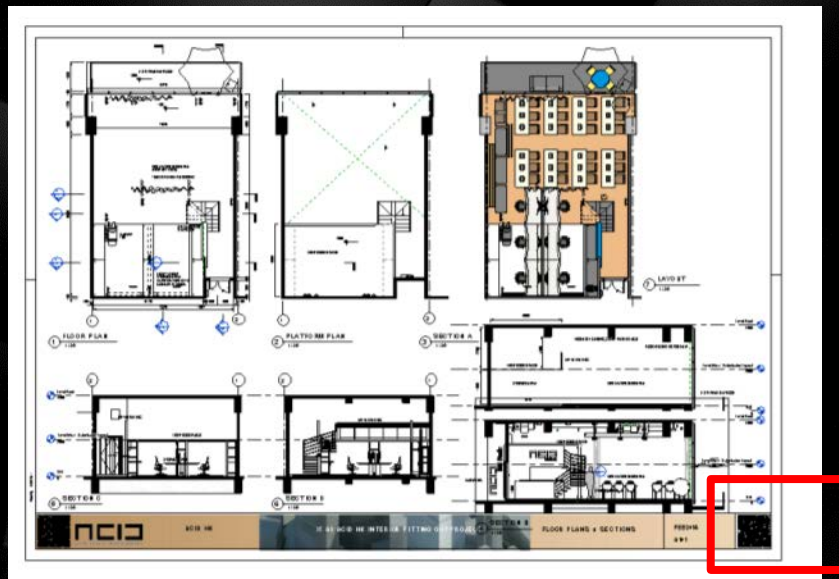

# 2D Print and BIM Model via QR Code

## 1.6 Prepare the drawing sheet from BIM model

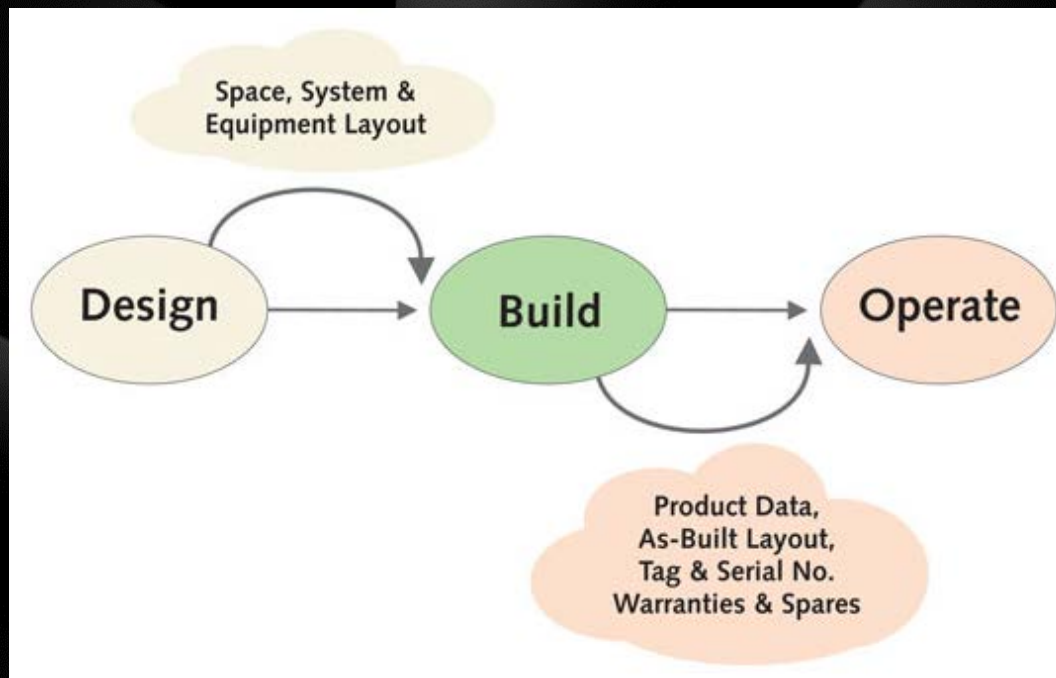

## 1.7 Generate and add QR Code on the drawing

# What is COBie?

## COBie...

... is a **Model View Definition** (MVD) as defined by buildingSMART

... is a **subset of IFC** with some additional data

... **simplifies** the work required to capture and record **project handover** data.

... **captures data as it is created** during design, construction, and commissioning

... **does not require endless spreadsheet editing**

... is a **UK Government requirement by 1<sup>st</sup> 2016**

## Why COBie?

Once a validated COBie dataset has been delivered to the building operator matching the built asset; all operations and maintenance data can be interrogated from a single place.

Meaning this type of information about built assets...

...Instead of this

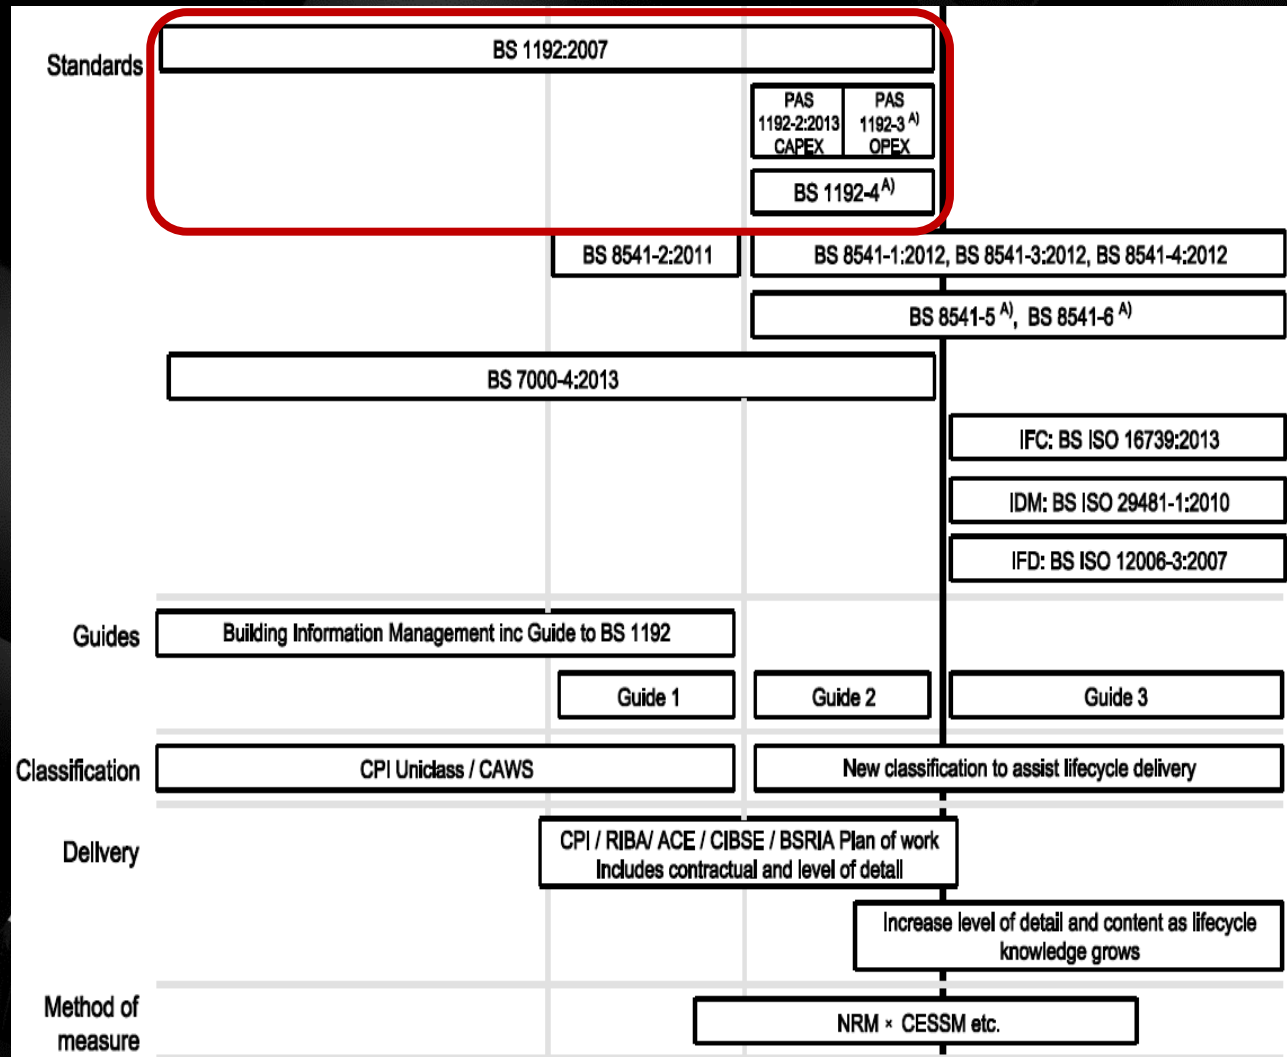

# B 555 roadmap - The Mandate taking shape

The BS/PAS 1192 series of standards are the most important releases to date.

PAS 1192:2 Concerns the Level 2 Delivery of projects.

# PAS1192:2 What's it all about?

**כ"ח**

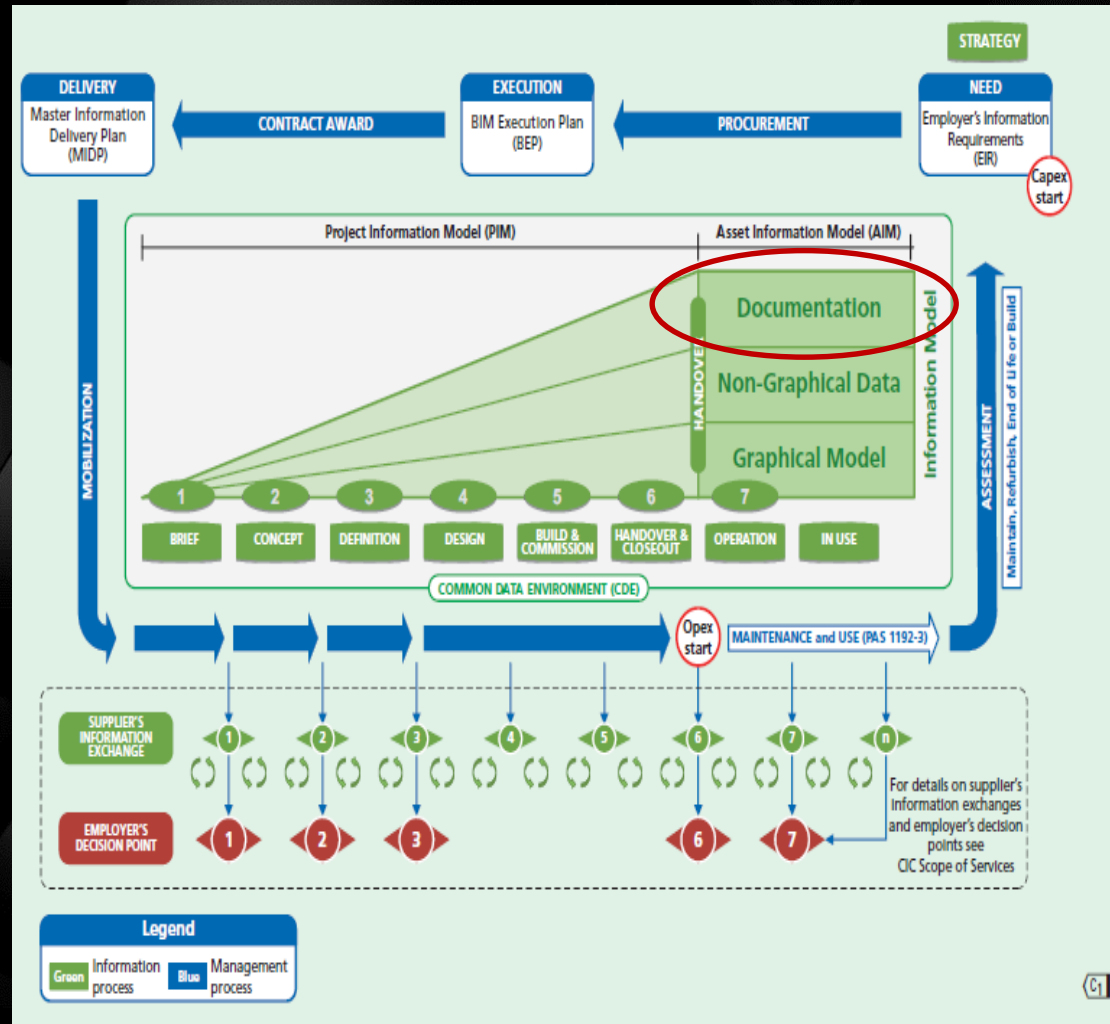

# What is BIM Data?

## Documentation

Information for use in the briefing, design, construction, operation, maintenance or decommissioning of a construction project, including but not limited to correspondence, drawings, schedules, specifications, calculations, spreadsheets

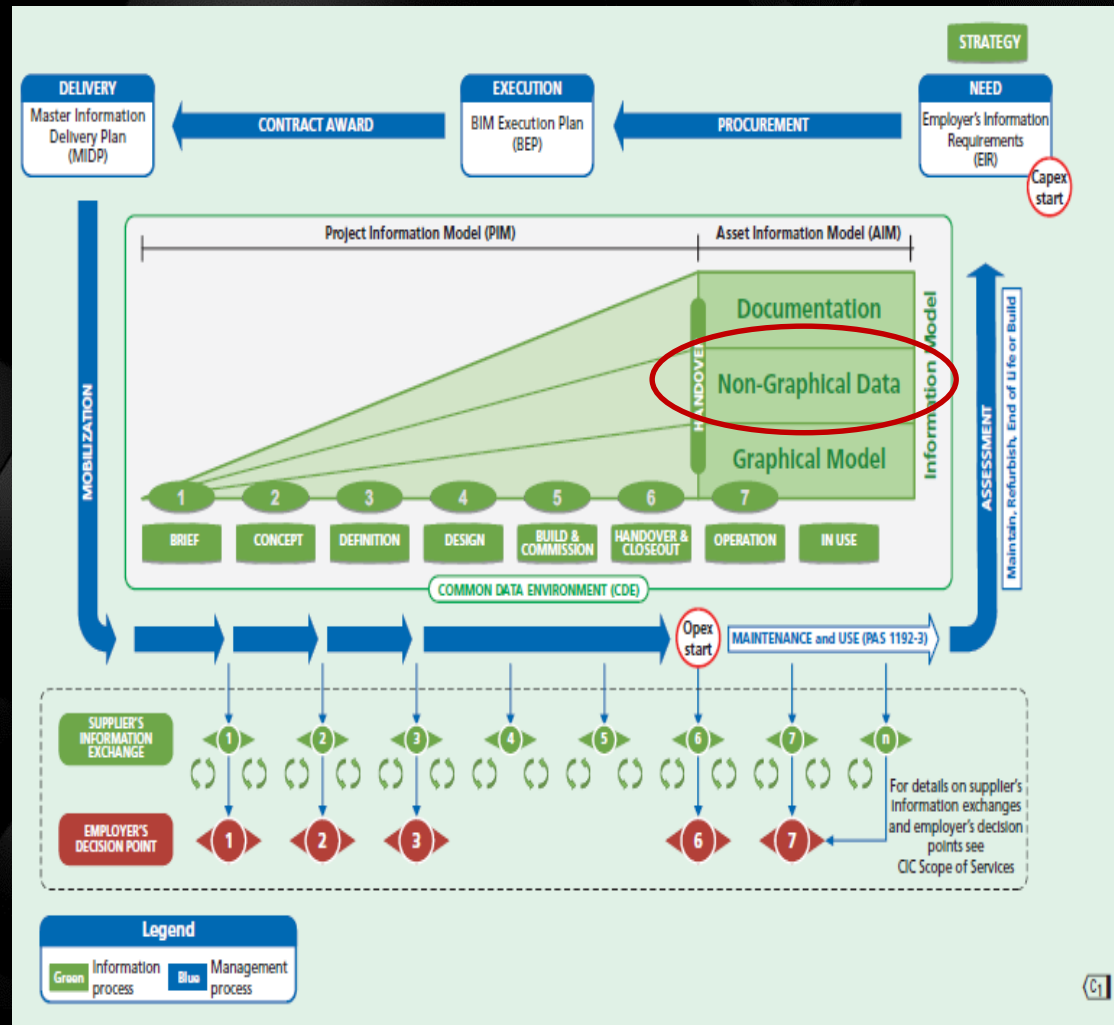

*NOTE Documents must either be immutable or incorporate a means of controlling changes.*

# What is BIM Data?

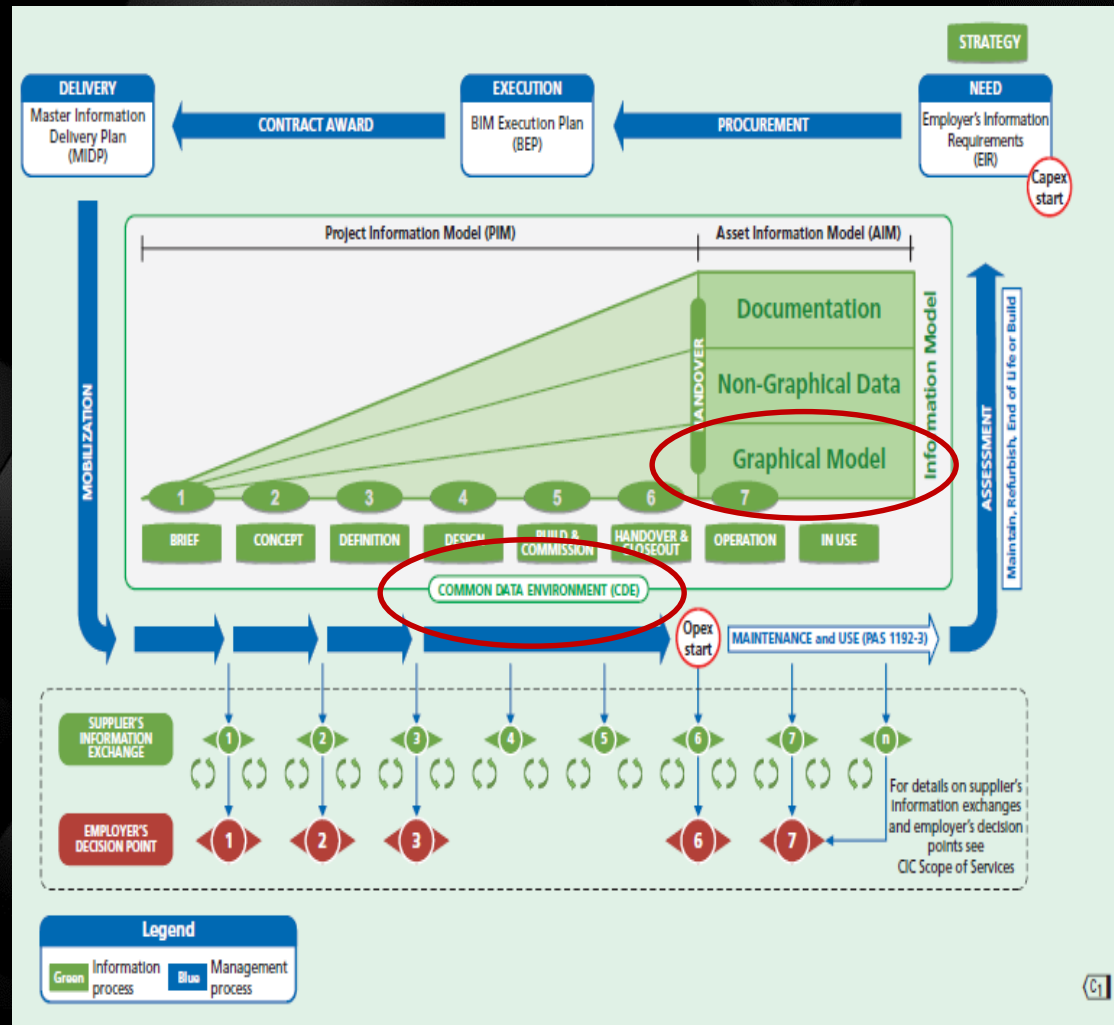

Non-graphical data  
data conveyed using alphanumeric  
characters

# What is BIM Data?

Graphical Model  
data conveyed using shape and  
arrangement in space

... ALL of this data is to be  
delivered to and shared through a  
Common Data Environment  
approach. It is a '*Fundamental  
Principle for Level 2 information  
modelling*'

=

**Common Data Environment**

# Common Data Environment (CDE) – PAS1192:2

‘**Single source of information** for any given project, used to collect, manage and disseminate all relevant approved project documents for multi-disciplinary teams in a **managed process.**’

‘NOTE, A CDE may use a project server, an **extranet**, a file-based retrieval system or other suitable toolset’

# What are the issues?

Documents and drawing are easy to share – 4Projects have been facilitating effect collaboration around these for years

But getting the most out of **sharing** Building Information Models presents a new challenge.....

How does everybody see the model and it's **data**?

**Ownership** the federated information?

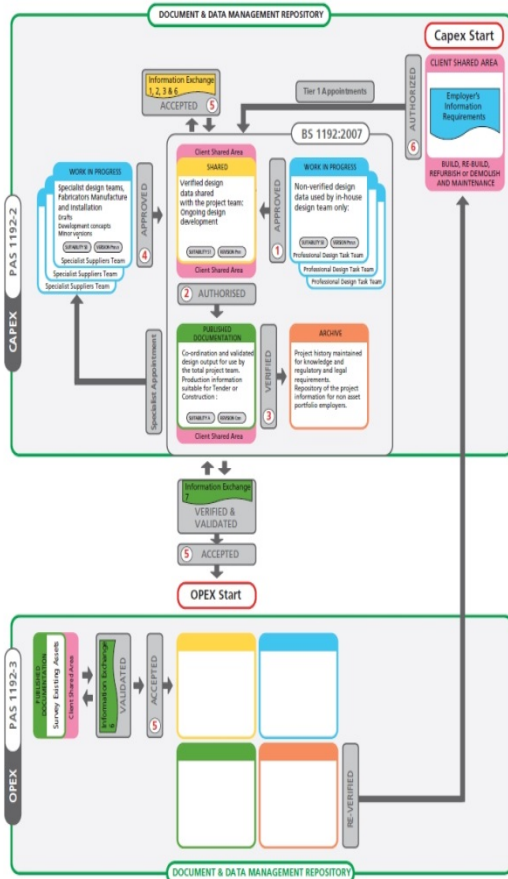

Can **unfinished worked** be shared to assist the design process?

How is the Information exchange data **compiled** and **validated**?

# PAS 1192:2 and 4Projects Workflows are here to help

Figure 15 – Extending the common data environment (CDE)

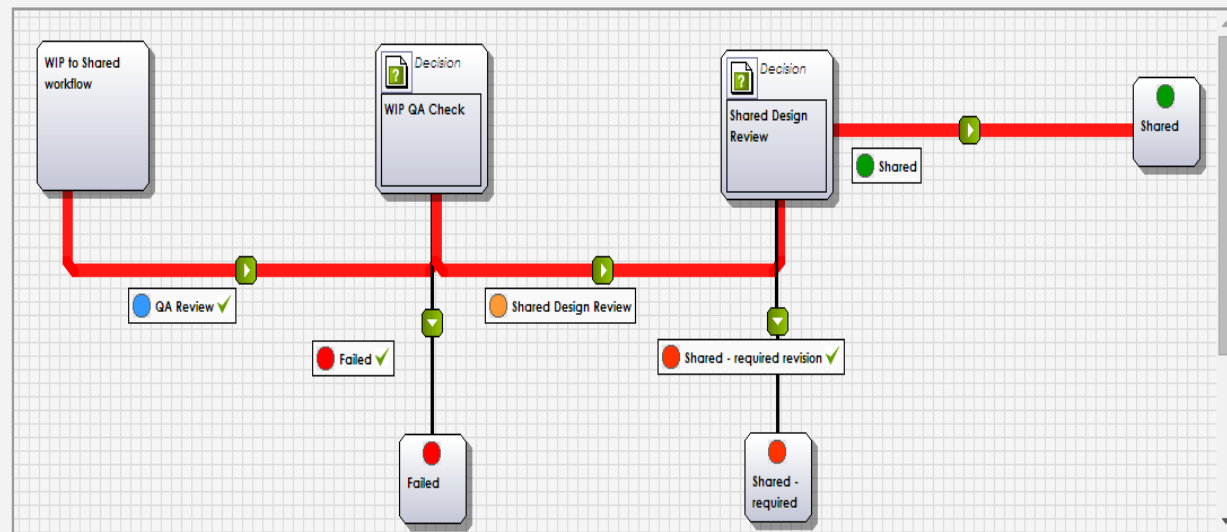

## Workflow

Help

**Figure 15 – Extending the common data environment (CDE)**

So that's the theory.... What about the practice?

## But doesn't this only apply to buildings?

The VSU model encompasses the entire project and incorporates 18 discrete design disciplines, showing how the entire project fits together.

**[The] Federated project supply chain [produced] a co-ordinated information model**

To maximise interoperability between disciplines, LU's preferred collaboration software, [ ] was used wherever practicable. When this was not possible, the transition of electronic information between the different platforms being used was assisted by tailoring software configurations and using **'platform agnostic' models.**

# Translating the B555 Roadmap into the CDE.

## **How does this fit with contracts, appointments, briefs etc...**

**Confirmation from the major contract providers has been received that on minor clause amendments are required to incorporate BIM Protocol to sit above the contract. The clause changes must be cascaded throughout the project appointment for successful collaboration.**

**The PAS1192:2 Level 2 Fundamentals include the provision Employers Information Requirements, from Client to Supplier and a BIM Execution plan in return from Supplier to Client.**

Thank You...
